## Introduction

On 1 April 2018 the group adopted IFRS 9 'Financial Instruments' which replaced IAS 39 'Financial Instruments: Recognition and Measurement'. IFRS 9 requires a move from incurred loss methodology under IAS 39 to an expected credit loss (ECL) methodology. Disclosure related to the initial application and the impact of the transition from IAS 39 to IFRS 9 were included in the transition disclosures published on 15 June 2018. The Investec plc transition disclosures can be accessed via the Investec website at [https://www.investec.com/en\\_int/welcome-to-investec/about-us/investor-relations/financial-information/subsidiary-results.html](https://www.investec.com/en_int/welcome-to-investec/about-us/investor-relations/financial-information/subsidiary-results.html)

The disclosure of the impact and accounting policies is included on pages 24 to 29. Throughout the rest of the disclosures financial comparative information is provided as at 31 March 2018 and has been presented on an IAS 39 basis and not restated as permitted under IFRS 9. Credit disclosures shown on pages 32 to 50 are reported under IFRS 9 with 1 April 2018 comparatives.

Additionally on 1 April 2018, the group adopted IFRS 15, 'Revenue from Contracts with Customers' which replaced IAS 18 'Revenue'. It applies to all contracts with customers except leases, financial instruments and insurance contracts. The standard establishes a more systematic approach for revenue measurement and recognition by introducing a five-step model governing revenue recognition. There is no impact on measurement and recognition principles previously applied under IAS 18. There is also no impact from the disclosure requirements of IFRS 15.

## Overview of results

Key financial statistics	30 Sept 2018	30 Sept 2017	% change	31 March 2018
Total operating income before expected credit losses/impairment losses (£'000)	729 334	656 025	11.2%	1 380 220
Operating costs (£'000)	569 133	512 165	11.1%	1 074 112
Operating profit before goodwill, acquired intangibles, non-operating items, taxation, and after non-controlling interests (£'000)	153 234	109 303	40.2%	199 357
Earnings attributable to ordinary shareholders (£'000)	118 188	78 216	51.1%	135 231
Cost to income ratio (%)	78.2%	78.2%		78.0%
Total capital resources (including subordinated liabilities) (£'000)	3 026 683	2 670 584	13.3%	2 920 374
Total equity (£'000)	2 222 795	2 063 244	7.7%	2 340 701
Total assets (£'000)	21 692 405	18 858 338	15.0%	20 611 752
Net core loans and advances (£'000)	10 056 099	8 899 704	13.0%	9 687 224
Customer accounts (deposits) (£'000)	12 376 364	10 849 643	14.1%	11 637 497
Loans and advances to customers as a % of customer deposits	81.3%	82.0%		83.2%
Cash and near cash balances (£'000)	6 456 407	5 013 067	28.8%	5 813 418
Funds under management (£'mn)	114 688	102 412	12.0%	106 647
Total gearing ratio (i.e. total assets to equity)	9.8x	9.1x		8.8x

Key asset quality and capital ratios	30 Sept 2018	1 April 2018
Capital adequacy ratio	15.2%	15.4%
Tier 1 ratio	11.9%	12.0%
CET 1 ratio	10.1%	10.1%
Leverage ratio – current	7.5%	8.0%
Leverage ratio – 'fully loaded'	7.1%	7.7%
Stage 3 exposure as a % of gross core loans and advances to customers subject to ECL	4.2%	6.3%
Stage 3 exposure net of ECL as a % of net core loans and advances to customers subject to ECL	3.0%	4.3%
Credit loss ratio <sup>#</sup>	0.41%*	1.14%**

\* Annualised.

\*\* As at 31 March 2018.

<sup>#</sup> Expected credit loss (ECL) impairment charges on gross core loans and advances as a % of average gross core loans and advances subject to ECL.

## Consolidated income statement

£'000	Six months to 30 Sept 2018	Six months to 30 Sept 2017	Year to 31 March 2018
Interest income	350 003	285 884	599 410

### Fair value hierarchy

The table below analyses recurring fair value measurements for financial assets and financial liabilities. These fair value measurements are categorised into different levels in the fair value hierarchy based on the inputs to the valuation technique used. The different levels are identified as follows:

**Level 1** – quoted (unadjusted) prices in active markets for identical assets or liabilities.

**Level 2** – inputs other than quoted prices included within level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices).

**Level 3** – inputs for the asset or liability that are not based on observable market data (unobservable inputs).

At 30 September 2018 £'000	Total instruments at fair value	Valuation technique applied		
		Level 1	Level 2	Level 3
<b>Assets</b>				
Cash and balances at central banks	695	695	–	–
Reverse repurchase agreements and cash collateral on securities borrowed	24 229	–	24 229	–
Sovereign debt securities	1 287 930	1 287 930	–	–
Bank debt securities	54 619	54 619	–	–
Other debt securities	189 203	–	103 923	85 280
Derivative financial instruments	585 998	–	548 646	37 352
Securities arising from trading activities	783 308	776 034	59	7 215
Investment portfolio	472 601	32 394	8 207	432 000
Loans and advances to customers	1 440 939	–	–	1 440 939
Other securitised assets	126 595	–	–	126 595
Other assets	74 502	74 502	–	–
	<b>5 040 619</b>	<b>2 226 174</b>	<b>685 064</b>	<b>2 129 381</b>
<b>Liabilities</b>				
Derivative financial instruments	638 969	285	618 639	20 045
Other trading liabilities	85 079	85 079	–	–
Debt securities in issue	390 098	–	390 098	–
Liabilities arising on securitisation of other assets	121 161	–	–	121 161
Subordinated liabilities	385 060	385 060	–	–
	<b>1 620 367</b>	<b>470 424</b>	<b>1 008 737</b>	<b>141 206</b>
<b>Net assets</b>	<b>3 420 252</b>	<b>1 755 750</b>	<b>(323 673)</b>	<b>1 988 175</b>

The group transfers between levels within the fair value hierarchy when the observability of inputs change or if the valuation methods change.

#### Transfers between level 1 and level 2

During the current period there were no significant transfers between level 1 and level 2.

### Fair value hierarchy (continued)

The following table is a reconciliation of the opening balances to the closing balances for the fair value measurements in level 3 of the fair value hierarchy:

£'000	Total level 3 financial instruments	Fair value through profit and loss instruments	Fair value through other comprehensive income
<b>Balance as at 31 March 2018</b>	<b>606 095</b>	<b>568 580</b>	<b>37 515</b>
Adoption of IFRS 9	1 240 100	862 821	377 279
<b>Balance as at 1 April 2018</b>	<b>1 846 195</b>	<b>1 431 401</b>	<b>414 794</b>
Total gains/(losses)	68 618	48 603	20 015
In the income statement	68 360	48 603	19 757
In the statement of comprehensive income	258	–	258
Purchases	724 649	496 403	228 246
Sales	(336 471)	(290 509)	(45 962)
Issues	2 670	2 670	–
Settlements	(386 999)	(300 204)	(86 795)
Transfers into level 3	–	–	–
Transfers out of level 3	–	–	–
Foreign exchange adjustments	69 513	60 073	9 440
<b>Balance as at 30 September 2018</b>	<b>1 988 175</b>	<b>1 448 437</b>	<b>539 738</b>

The following table quantifies the gains or (losses) included in the income statement and other comprehensive income recognised on level 3 financial instruments:

For the six months to 30 September 2018 £'000	Total	Realised	Unrealised
<b>Total gains or (losses) included in the income statement for the period</b>			
Net interest income	49 756	38 687	11 069
Investment income	11 533	23 496	(11 963)
Trading income arising from customer flow	7 071	1 334	5 737
	<b>68 360</b>	<b>63 517</b>	<b>4 843</b>
<b>Total gains or (losses) included in other comprehensive income for the period</b>			
Gains on realisation on debt instruments at FVOCI recycled through the income statement	19 757	19 757	–
Fair value movements on debt instruments at FVOCI taken directly to other comprehensive income	258	–	258
	<b>20 015</b>	<b>19 757</b>	<b>258</b>

For the period ended 30 September 2018, there were no significant transfers from level 3 into level 2. There were no transfers from level 2 to the level 3 category.

## Additional IAS 34 disclosures

(continued)

### Level 2 financial assets and financial liabilities

The following table sets out the group's principal valuation techniques as at 30 September 2018 used in determining the fair value of its financial assets and financial liabilities that are classified within level 2 of the fair value hierarchy.

	Valuation basis/techniques	Main assumptions
<b>Assets</b>		
Reverse repurchase agreements and cash collateral on securities borrowed	Discounted cash flow model, Hermite interpolation	Discount rates
Other debt securities	Discounted cash flow model	Discount rates, swap curves and NCD curves, external prices, broker quotes
Derivative financial instruments	Discounted cash flow model, Hermite interpolation, industry standard derivative pricing models including Black-Scholes	Discount rate, risk free rate, volatilities, forex forward points and spot rates, interest rate swap curves and credit curves
Securities arising from trading activities	Standard industry derivative pricing model	Interest rate curves, implied bond spreads, equity volatilities
Investment portfolio	Discounted cash flow model, net asset value model Comparable quoted inputs	Discount rate and fund unit price Net assets
<b>Liabilities</b>		
Derivative financial instruments	Discounted cash flow model, Hermite interpolation, industry standard derivative pricing models including Black-Scholes	Discount rate, risk free rate, volatilities, forex forward points and spot rates, interest rate swap curves and credit curves
Repurchase agreements and cash collateral on securities lent	Discounted cash flow model, Hermite interpolation	Discount rates
Debt securities in issue	Discounted cash flow model	Discount rates

## Additional IAS 34 disclosures

(continued)

### Sensitivity of fair values to reasonably possible alternative assumptions by level 3 instrument type

The fair value of financial instruments in level 3 are measured using valuation techniques that incorporate assumptions that are not evidenced by prices from observable market data. The following table shows the sensitivity of these fair values to reasonably possible alternative assumptions, determined at a transactional level:

30 September 2018	Balance sheet value £'000	Significant unobservable input	Range of unobservable input used	Favourable changes £'000	Unfavourable changes £'000
<b>Assets</b>					
Other debt securities	85 280	Potential impact on income statement		7 627	(7 539)
		Cash flow adjustments	CPR 8.6%	–	(68)
		Credit spreads	5.1%	140	(136)
		Other <sup>^</sup>	^	7 487	(7 335)
Derivative financial instruments	37 352	Potential impact on income statement		6 836	(9 173)
		Volatilities	4.0% – 9.0%	212	(212)
		Cash flow adjustments	CPR 7.6% – 11.2%	110	(101)
		Underlying asset value <sup>^^</sup>	^^	5 684	(8 029)
		Other <sup>^</sup>	^	830	(831)
Securities arising from trading activities	7 215	Potential impact on income statement			
		Cash flow adjustments	CPR 9.2%	1 125	(991)
Investment portfolio	432 000	Potential impact on income statement		79 650	(75 135)
		Price earnings multiple	4.0 x – 10.3 x	6 117	(5 828)
		WACC	20.0%	29 594	(35 004)
		Underlying asset value <sup>^^</sup>	^^	9 472	(3 029)
		Other <sup>^</sup>	^	34 467	(31 274)
Loans and advances to customers	1 440 939	Potential impact on income statement		40 113	(50 083)
		Credit spreads	0.2% – 29.0%	4 202	(6 048)
		Underlying asset value <sup>^^</sup>	^^	2 130	(1 715)
		Other <sup>^</sup>	^	33 781	(42 320)
		Potential impact on other comprehensive income			
		Credit spreads	0.1% – 5.1%	1 135	(1 615)
Other securitised assets	126 595	Potential impact on income statement			
		Cash flow adjustments	CPR 7.7%	723	(728)
<b>Total level 3 assets</b>	<b>2 129 381</b>			<b>137 209</b>	<b>(145 264)</b>
<b>Liabilities</b>					
Derivative financial instruments	20 045	Potential impact on income statement		(9 085)	7 268
		Cash flow adjustments	CPR 7.6% – 11.2%	(81)	89
		Volatilities	8.5%	(2)	2
		Underlying asset value <sup>^^</sup>	^^	(9 002)	7 177
Liabilities arising on securitisation of other assets*	121 161	Potential impact on income statement			
		Volatilities	CPR 8.0%	(244)	205
<b>Total level 3 liabilities</b>	<b>141 206</b>			<b>(9 329)</b>	<b>7 473</b>
<b>Net level 3 assets</b>	<b>1 988 175</b>				

\* The sensitivity of the fair value of liabilities arising on securitisation of other assets has been considered together with other securitised assets.

<sup>^</sup> Other – The valuation sensitivity has been assessed by adjusting various inputs such as expected cash flows, discount rates, earnings multiples rather than a single input. It is deemed appropriate to reflect the outcome on a portfolio basis for the purposes of this analysis as the sensitivity of the assets cannot be determined through the adjustment of a single input.

<sup>^^</sup> Underlying asset values are calculated by reference to a tangible asset, for example property, aircraft or shares.

## Additional IAS 34 disclosures

(continued)

In determining the value of level 3 financial instruments, the following are the principal inputs that can require judgement:

### Credit spreads

Credit spreads reflect the additional yield that a market participant would demand for taking exposure to the credit risk of an instrument. The credit spread for an instrument forms part of the yield used in a discounted cash flow calculation. In general a significant increase in a credit spread in isolation will result in a movement in fair value that is unfavourable for the holder of a financial instrument. It is an unobservable input into a discounted cash flow valuation.

### Discount rates

Discount rates (including WACC) are used to adjust for the time value of money when using a discounted cash flow valuation method. Where relevant, the discount rate also accounts for illiquidity, market conditions and uncertainty of future cash flows.

### Volatilities

Volatility is a key input in the valuation of derivative products containing optionality. Volatility is a measure of the variability or uncertainty in returns for a given derivative underlying. It represents an estimate of how much a particular underlying instrument, parameter or index will change in value over time.

### Cash flows

Cash flows relate to the future cash flows which can be expected from the instrument and requires judgement. Cash flows are input into a discounted cash flows valuation.

### Price earnings multiple

The price-to-earnings ratio is an equity valuation multiple used in the adjustment of underlying market prices. It is a key driver in the valuation of unlisted investments.

### EBITDA

A company's earnings before interest, taxes, depreciation and amortisation. This is the main input into a price earnings multiple valuation method.

### Underlying asset value

In instances where cash flows have links to referenced assets, the underlying asset value is used to determine the fair value. The underlying asset valuation is derived using observable market prices sourced from broker quotes, specialist valuers or other reliable pricing sources.

## Fair value of financial instruments at amortised cost

The table sets out the fair value of financial instruments held at amortised cost where carrying value is not a reasonable approximation of fair value.

At 30 September 2018 £'000	Carrying amount	Fair value
<b>Assets</b>		
Cash and balances at central banks <sup>^</sup>	3 882 009	3 882 009
Loans and advances to banks	1 088 766	1 088 759
Reverse repurchase agreements and cash collateral on securities borrowed	657 047	657 041
Other debt securities	167 395	167 408
Loans and advances to customers	8 616 692	8 592 268
Other loans and advances	217 152	221 103
Other assets	915 784	917 047
	<b>15 544 845</b>	<b>15 525 635</b>
<b>Liabilities</b>		
Deposits by banks	1 436 671	1 440 621
Repurchase agreements and cash collateral on securities lent <sup>^</sup>	155 159	155 159
Customer accounts (deposits)	12 376 364	12 345 572
Debt securities in issue	1 963 579	1 992 196
Other liabilities	1 015 742	1 015 299
Subordinated liabilities	418 828	416 203
	<b>17 366 343</b>	<b>17 365 050</b>

<sup>^</sup> Financial instruments for which fair value approximates carrying value.

## Accounting policies

The group accounting policies, related to financial instruments which have been significantly changed as the result of the implementation of IFRS 9, are applicable with effect from 1 April 2018, and are set out below. The full set of accounting policies is set out in the 2018 annual report.

### Standards adopted during the year ending 31 March 2019

The requirements of IFRS 9 'Financial Instruments' were adopted from 1 April 2018. IFRS 9 includes an accounting policy choice to remain with IAS 39 hedge accounting, which the group has exercised.

The adoption of IFRS 9 includes the adoption of 'Prepayment Features with Negative Compensation (Amendments to IFRS 9)' which is effective for annual periods beginning on or after 1 January 2019 with early adoption permitted. This amendment was endorsed by the EU in March 2018 and the group has decided to apply the amendment from 1 April 2018 in order to reflect all of the effects of IFRS 9 at the same time.

The classification and measurement and impairment requirements are applied retrospectively by adjusting the opening balance sheet at the date of initial application, with no requirement to restate comparative periods. The group is not restating comparatives on initial application as permitted by IFRS 9.

### Financial instruments

Financial instruments are initially recognised at their fair value. For financial assets or financial liabilities not held at fair value through profit or loss, transaction costs that are directly attributable to the acquisition or issue of the financial assets or financial liabilities are included in the initial measurement. All other transaction costs are recorded in the income statement immediately. Regular way purchase and sales transactions in respect of financial assets that require delivery of a financial instrument within the timeframe established by market convention are recorded at trade date.

### Business model assessment

For financial assets, IFRS 9 requires that a business model assessment is carried out which reflects how the group manages the assets in order to generate cash flows. The assessment is at a portfolio level, being the level at which the portfolio is managed. Factors considered by the group

in determining the business model for a group of assets include past experience on how the cash flows for these assets were collected, how the assets' performance is evaluated and reported and how risks are assessed and managed.

The standard sets out different types of business model:

- **Hold to collect:** it is intended to hold the asset to maturity to earn interest, collecting repayments of principal and interest from the customer. These assets are accounted for at amortised cost.
- **Hold to collect and sell:** this model is similar to the hold to collect model, except that the entity may elect to sell some or all of the assets before maturity to achieve the objectives of the business model. These assets are accounted for at FVOCI.
- **Hold to sell/managed on a fair value basis:** the entity originates or purchases an asset with the intention of disposing of it in the short or medium term to benefit from capital appreciation or the portfolio is managed on a fair value basis. These assets are accounted for at FVPL.

However, the group may make the following irrevocable election/designation at initial recognition of a financial asset on an asset-by-asset basis:

- elect to present subsequent changes in fair value of an equity investment that is neither held for trading nor contingent consideration recognised by an acquirer in a business combination to which IFRS 3 applies, in OCI; and
- a debt instrument that meets the amortised cost or FVOCI criteria as measured at FVPL if doing so eliminates or significantly reduces an accounting mismatch (referred to as the fair value option).

The classification into one of these categories is based on the entity's business model for managing the assets and the contractual cash flow characteristics of the assets.

### Solely payment of principal and interest (SPPI)

Where the business model is to hold assets to collect contractual cash flows or to collect contractual cash flows and sell, the group assesses whether the assets' cash flows represent solely payments of principal and interest (the SPPI test). In making this assessment, the group considers whether

the contractual cash flows are consistent with a basic lending arrangement (i.e. interest includes only consideration for the time value of money, credit risk, other basic lending risks and a profit margin that is consistent with a basic lending arrangement). Where the contractual terms introduce exposure to risk or volatility that are inconsistent with a basic lending arrangement, the related asset is classified and measured at FVPL.

Financial assets with embedded derivatives are considered in their entirety when determining whether their cash flows are solely payments of principal and interest.

### Financial assets and liabilities measured at amortised cost

Financial assets that are held to collect the contractual cash flows and that contain contractual terms that give rise to cash flows that are solely payments of principal and interest, such as most loans and advances to banks and customers and some debt securities, are measured at amortised cost. In addition, most financial liabilities are measured at amortised cost.

The group may commit to provide a loan which has not yet been drawn. When the loan that arises from the lending commitment is expected to meet the criteria to be measured at amortised cost the undrawn commitment is also considered to be and is included in the impairment calculation below.

The carrying value of these financial assets at initial recognition includes any directly attributable transactions costs. If the initial fair value is lower than the cash amount advanced, such as in the case of some leveraged finance and syndicated lending activities, the difference is deferred and recognised over the life of the loan through the recognition of interest income, unless the loan is credit impaired.

### Financial assets and liabilities measured at fair value through other comprehensive income (FVOCI)

Financial assets held for a business model that is achieved by both collecting contractual cash flows and selling and that contain contractual terms that give rise on specified dates to cash flows that are solely payments of principal and interest are measured at FVOCI. They are recognised

on the trade date when the group enters into contractual arrangements to purchase and are normally derecognised when they are either sold or redeemed.

They are subsequently remeasured at fair value and changes therein (except for those relating to impairment, interest income and foreign currency exchange gains and losses) are recognised in other comprehensive income until the assets are sold. Upon disposal, the cumulative gains or losses in other comprehensive income are recognised in the income statement as 'Gains less losses arising from derecognition of debt instruments measured at fair value through other comprehensive income'.

Financial assets measured at FVOCI are included in the impairment calculations set out below and impairment is recognised in profit or loss.

### Impairment of financial assets held at amortised cost or FVOCI

At each balance sheet date each financial asset or portfolio of advances categorised at amortised cost or at fair value through other comprehensive income, issued financial guarantee and loan commitment is measured for ECL impairment. Loss allowances are forward-looking, based on 12-month expected credit losses where there has not been a significant increase in credit risk rating, otherwise allowances are based on lifetime expected losses.

Expected credit losses are a probability-weighted estimate of credit losses. The probability is determined by the risk of default which is applied to the cash flow estimates. On a significant increase in credit risk, credit losses are rebased from 12-month to lifetime expectations. A change in credit risk is typically but not necessarily associated with a change in the expected cash flows.

The costs of loss allowances on assets held at amortised cost are presented as impairments in the income statement. Allowances in respect of financial guarantees and loan commitments are presented as other liabilities and charges recorded within income statement impairments. Financial assets held at amortised cost are presented net of allowances except where the asset has been wholly or partially written off.

Financial assets where 12-month ECL is recognised are considered to be 'Stage 1', financial assets which are considered to have experienced a significant increase in credit risk are in 'Stage 2', and financial assets for which there is objective evidence of impairment are considered to be in default or otherwise credit-impaired are in 'Stage 3'.

### Financial assets and liabilities held at fair value through profit or loss

Financial instruments held at fair value through profit or loss include all instruments classified as held-for-trading those instruments designated as held at fair value through profit or loss and those financial assets which do not meet the criteria for amortised cost or FVOCI.

Financial instruments classified as FVPL are initially recorded at fair value on the balance sheet with changes in fair value subsequently recognised in the income statement. Financial instruments are classified as trading when they are held with the intention of short-term disposal, held with the intention of generating short-term profit, or are derivatives which are not designated as part of effective hedges. Financial instruments designated as held at fair value through profit or loss are designated as such on initial recognition of the instrument and remain in this classification until derecognition.

Own credit risk on financial liabilities designated at fair value is recognised in other comprehensive income.

Financial assets and liabilities are designated as held at fair value through profit or loss only if:

- they eliminate or significantly reduce a measurement or recognition inconsistency that would otherwise arise from measuring assets or liabilities or recognising the gains and losses on them on different bases; or
- a group of financial liabilities or both financial assets and financial liabilities is managed and its performance is evaluated on a fair value basis in accordance with a documented risk management or investment strategy and information about the group is provided internally on that basis to the group's key management personnel; or

- a financial liability contract contains one or more embedded derivatives (which significantly modifies the cash flows that would be required by the contract and is not clearly prohibited from separation from the host contract) and the group has designated the entire hybrid contract as a financial instrument at fair value through profit or loss.

### Securitisation/credit investment and trading activities exposures

The group makes use of securitisation vehicles as a source of finance, as a means of risk transfer and to leverage returns through the retention of equity tranches in low default rate portfolios. The group predominantly focuses on the securitisation of lease receivables. The group also trades in structured credit investments.

The structured entities are consolidated under IFRS 10 Consolidated Financial Statements when the group has exposure to or rights to, variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee.

Loans and advances that are originated are transferred to structured entities, and the structured entities issue debt securities to external investors to fund the purchase of the securitised assets. When the group consolidates the structured entity, the group recognises the assets and liabilities on a gross basis. When the group does not consolidate the structured entity, the securitised assets are derecognised and only any position still held by the group in the structured entity is reflected.

### Day-one profit or loss

When the transaction price differs from the fair value of other observable current market transactions in the same instrument or based on the valuation technique whose variables include only data from observable markets, the difference between the transaction price and fair value is recognised immediately in the income statement.

In cases where fair value is determined using data which is not observable, the difference between the transaction price and model value is only recognised in the income statement when the inputs become observable, or when the instrument is derecognised or over the life of the transaction.

# Accounting policies

(continued)

## Derecognition of financial assets and liabilities

A financial asset, or a portion thereof, is derecognised when the group's rights to cash flows have expired or when the group has transferred its rights to cash flows relating to the financial assets and either (a) the group has transferred substantially all the risks and rewards associated with the financial assets or (b) the group has neither transferred nor retained substantially all the risks and rewards associated with the financial assets but has transferred control of the assets.

The treatment of a renegotiation or modification of the contractual cash flows of a financial asset depends upon whether the modification is done for commercial reasons, in which case if they are significant the old asset is derecognised and a new asset recognised, or because of financial difficulties of the borrower.

A financial liability is derecognised when it is extinguished, that is when the obligation is discharged, cancelled or expired. When an existing financial liability is replaced or modified with substantially different terms, such a replacement or modification is treated as a derecognition of the original liability and the recognition of a new liability. The difference in the respective carrying amounts is recognised in the income statement.

## Reclassification of financial instruments

Financial assets are only reclassified where there has been a change in business model. Financial liabilities cannot be reclassified.

## Derivative financial instruments

All derivative instruments of the group are recorded on the balance sheet at fair value. Positive and negative fair values are reported as assets and liabilities respectively.

Derivative positions are entered into either for trading purposes or as part of the group's asset and liability management activities to manage exposures to interest rate and foreign currency risks. Both realised and unrealised profit or losses arising on derivatives are recognised in the income statement as part of trading income (other than circumstances in which cash flow hedging is applied as detailed in the hedge accounting section below).

Derivative instruments entered into as economic hedges which do not qualify for hedge accounting and derivatives that are entered into for trading purposes are treated in the same way as instruments that are held-for-trading.

Credit derivatives are entered into for trading purposes. Credit derivatives are initially recognised at their fair values, being the transaction price of the derivative. Subsequently the derivatives are carried at fair value, with movements in fair value through profit or loss, based on the current market price or remeasured price. The counterparty risk from derivative transactions is taken into account when reporting the fair value of derivative positions. The adjustment to the fair value is known as the credit value adjustment (CVA).

## Hedge accounting

The group applies either fair value or hedge of net investments in foreign operations accounting when the transactions meet the specified hedge accounting criteria. To qualify for hedge accounting treatment, the group ensures that all of the following conditions are met:

- At inception of the hedge, the group formally documents the relationship between the hedging instrument(s) and hedged item(s) including the risk management objectives and the strategy in undertaking the hedge transaction. Also at the inception of the hedge relationship, a formal assessment is undertaken to ensure the hedging instrument is expected to be highly effective in offsetting the designated risk in the hedged item. A hedge is expected to be highly effective if the changes in fair value attributable to the hedged risk during the period for which the hedge is designated are expected to offset in a range of 80% to 125%.

- The effectiveness of the hedge can be reliably measured, i.e. the fair value of the hedged item that are attributable to the hedged risk and the fair value of the hedging instrument can be reliably measured.
- The hedge effectiveness is assessed on an ongoing basis and determined actually to have been highly effective throughout the financial reporting periods for which the hedge was designated.

For qualifying fair value hedges, the change in fair value of the hedging instrument is recognised in the income statement. Changes in fair value of the hedged item that is attributable to the hedged risk are also recognised in the income statement.

## Embedded derivatives

To the extent that a derivative may be embedded in a hybrid contract for a financial liability and the hybrid contract is not carried at fair value with changes in fair value recorded in the income statement, the embedded derivative is separated from the host contract and accounted for as a standalone derivative if and only if:

- The economic characteristics and risks of the embedded derivative are not closely related to the economic characteristics and risks of the host contract; and
- A separate instrument with the same terms as the embedded derivative would meet the definition of a derivative.

## Offsetting of financial assets and liabilities

Financial assets and liabilities are offset when there is both an intention to settle on a net basis (or simultaneously) and a currently enforceable legal right to offset exists.

### Issued debt and equity financial instruments

Financial instruments issued by the group are classified as liabilities if they contain a contractual obligation to deliver cash or another financial asset.

Financial instruments issued by the group are classified as equity where they confer on the holder a residual interest in the group, and the group has no obligation to deliver either cash or another financial asset to the holder. The components of compound issued financial instruments are accounted for separately with the liability component separated first and any residual amount being allocated to the equity component.

Equity instruments issued by subsidiaries of Investec plc are recorded as non-controlling interests on the balance sheet. Equity instruments are initially measured net of directly attributable issue costs.

Treasury shares represent Investec plc shares repurchased by the group which has not been cancelled. Treasury shares are deducted from shareholders' equity and represent the purchase consideration, including directly attributable costs. Where treasury shares are subsequently sold or reissued, net proceeds received are included in shareholders' equity.

Dividends on ordinary shares are recognised as a deduction from equity at the earlier of payment date or the date that it is approved by Investec plc shareholders.

### Sale and repurchase agreements (including securities borrowing and lending)

Securities sold subject to a commitment to repurchase, at a fixed price or a selling price plus a lender's return, remain on balance sheet. Proceeds received are recorded as a liability on balance sheet under 'repurchase agreements and cash collateral on securities lent'. Securities that are purchased under a commitment to resell the securities at a future date are not recognised on the balance sheet. The consideration paid is recognised as an asset under 'reverse repurchase agreements and cash collateral on securities borrowed'.

The difference between the sale and repurchase prices is treated as interest income/expense and is accrued over the life of the agreement using the effective interest method.

Securities borrowing transactions that are not cash collateralised are not included on the balance sheet. Securities lending and borrowing transactions which are cash collateralised are accounted for in the same manner as securities sold or purchased subject to repurchase commitments.

### Financial guarantees

Financial guarantee contracts issued by the group are those contracts that require a payment to be made to reimburse the holder for a loss it incurs because the specified debtor fails to make a payment when due, in accordance with the terms of a debt instrument. Financial guarantees are initially recognised at fair value, adjusted for the transaction costs that are directly attributable to the issuance of the guarantee.

Subsequent to initial recognition, the liability under each guarantee is measured at the higher of the initial amount recognised less cumulative revenue and the initial amount less any impairment calculated as set out above. Subsequent to initial measurement, all changes in the balance sheet carrying value are recognised in the income statement.

# Risk management

The following risk management and capital section will provide detail on the quantitative disclosure for the six months to 30 September 2018. For additional qualitative disclosures, definitions and descriptions, please refer to our annual financial statements for the year ended 31 March 2018 and our IFRS 9 Financial Instruments combined transition report as at 1 April 2018.

## Credit and counterparty risk management

Credit and counterparty risk is assumed through a range of client-driven lending activities with private and corporate clients as well as through other counterparties, such as financial institutions and sovereigns. These activities are diversified across a number of business activities.

### Credit and counterparty risk governance structure

To manage, measure, monitor and mitigate credit and counterparty risk, independent credit committees exist in each geography where we assume credit risk. These committees operate under board-approved delegated limits, policies and procedures. There is a high level of executive involvement and non-executive review and oversight in the credit decision-making forums depending on the size and complexity of the deal. It is our policy that all centralised credit committees are comprised of voting members who are independent of the originating business unit. All decisions to enter into a transaction are based on unanimous consent.

In addition to the credit committees, the following processes assist in managing, measuring and monitoring credit and counterparty risk. The scope of these forums and committees have been adjusted where necessary to incorporate changes to governance processes arising from IFRS 9 implementation:

- Day-to-day arrears management and regular arrears reporting ensure that individual positions and any potential trends are dealt with in a timely manner.
- Watchlist committees review the management of distressed loans, potential problem loans and exposures in arrears that require additional attention and supervision. These

committees review ECL impairments and staging at an asset level as well as potential fair value adjustments to loans and advances to customers and provide recommendations for the appropriate staging and level of ECL impairment if needed.

- Credit watchlist forum reviews and manages exposures that may potentially become distressed as a result of changes in the economic environment or adverse share price movements, or that are vulnerable to volatile exchange rate or interest rate movements or idiosyncratic financial distress.
- Arrears, default and recoveries forums specifically review and manage distressed loans and potentially distressed loans for private clients and corporates. These forums also review and monitor counterparties who have been granted forbearance measures.

### Credit risk classification and provisioning policy

The group has incorporated IFRS 9 requirements into our group credit risk classification and provisioning policy. A framework has been established that incorporates both quantitative and qualitative measures. Any decisions in relation to significant increase in credit risk will be management decisions subject to approval by the appropriate committees. The policies for financial assets at amortised cost and at fair value through other comprehensive income (FVOCI), in accordance with IFRS 9, have been developed as described below:

#### Definition of default

The group has aligned the IFRS 9 and regulatory definitions of default, credit impaired and non-performing exposure. Assets that are more than 90 days past due, or considered by management as unlikely to pay their obligations in full without realisation of collateral are considered as exposures in default.

#### Stage 1

All assets that are considered performing and have not had a significant increase in credit risk are reported as Stage 1 assets. Under IFRS 9 these Stage 1 financial assets have loss allowances measured at an amount equal to 12-month ECL.

#### Stage 2

Financial assets are considered to be in Stage 2 when their credit risk has increased significantly since initial recognition. The group was not required to hold specific impairments against these assets under IAS 39, however, a loss allowance equivalent to a lifetime ECL is now required to be held under IFRS 9.

The group's primary indicator for Stage 2 assets are distressed loans, potential problem loans and exposures in arrears that require additional attention and supervision from Watchlist committees and are under management review. This comprises exposures that may potentially become distressed as a result of changes in the economic environment or adverse share price movements, or that are vulnerable to volatile exchange rate or interest rate movements, or idiosyncratic financial distress, or private clients who have undergone a significant deterioration in financial circumstances.

Assets that have been subject to forbearance are considered to be, at a minimum, Stage 2. Forbearance measures refer to concessions such as modification of the terms and conditions or refinancing that has been granted to a debtor in financial difficulties. These exposures are assessed on a case by case basis to determine whether the proposed modifications will be considered as forbearance. Where the credit committee considers it likely that the client will be able to return to perform against the original contractual obligations within a reasonable timeframe these assets will be considered performing and in Stage 2. Forbearance is distinguished from commercial renegotiations which take place as part of normal business activity and standard banking practice.

In addition to loans under management review, an asset may also move from Stage 1 to Stage 2 if the model calculated probability of default (PD) has significantly increased since origination. This is tested as both a relative and absolute measure to further inform whether a significant deterioration in lifetime risk of default has occurred.

As a backstop, the group does not rebut the presumption in IFRS 9 that all financial assets that are more than 30 days past due have experienced a significant increase in credit risk.

Exposures move back to Stage 1 once they no longer meet the criteria above for a significant increase in credit risk and as cure periods (specifically relating to forbore exposures) are met.

### Stage 3

Financial assets are included in Stage 3 when there is objective evidence of credit impairment. Under IFRS 9, the group assesses a loan as Stage 3 when contractual payments of either principal or interest are past due for more than 90 days, the debtor is assessed as unlikely to pay and credit impaired, or the loan is otherwise considered to be in default, for example due to the appointment of an administrator or in receivership. Forborne loans that are considered non-performing, for example if a loan is not expected to return to fulfil the original contractual obligations in a reasonable timeframe, will be classified as Stage 3.

The group's policy is not to rebut the presumption in IFRS 9 that loans which are more than 90 days past due are in default.

### Expected credit loss (ECL)

The assessment of credit risk and the estimation of ECL are required to be unbiased, probability-weighted and should incorporate all available information relevant to the assessment, including information about past events, current conditions and reasonable and supportable forecasts of economic conditions at the reporting date. In addition, the estimation of ECL should take into account the time value

of money. As a result, the recognition and measurement of impairment is intended to be more forward-looking than under IAS 39, and the resulting impairment charge may be more volatile.

A management overlay of £17 million (£25 million at 1 April 2018) has been considered appropriate in addition to the bank's calculated model-driven ECL. This is due to Investec plc's limited experience of utilising model output for reporting purposes and uncertainty over the models' predictive capability. The overlays have been designed to capture specific areas of model uncertainty during the initial adoption of IFRS 9. The model methodologies have been enhanced during the period and therefore the management overlay has been commensurately reduced at 30 September 2018 to reflect the lower level of model uncertainty. The bank will continue to assess the appropriateness of this management overlay and expect that it will continue to be unwound as the uncertainty of the models predictive capability reduces.

### Write-offs

The group's policy on when financial assets are written off has not significantly changed on adoption of IFRS 9. A loan or advance is normally written off, in full, against the related allowance when the proceeds from realising any available security have been received or there is a reasonable amount of certainty that the exposure will not be recovered. Similarly the treatment and recognition of recoveries is unaffected by the implementation of IFRS 9. Any recoveries of amounts previously written off decrease the amount of impairment losses.

## Risk management

(continued)

### An analysis of gross credit and counterparty exposures

Gross credit and counterparty exposure totalled £20.5 billion at 30 September 2018. Cash and near cash balances amounted to £6.5 billion and are largely reflected in the following line items in the table below: cash and balances at central banks, loans and advances to banks and sovereign debt securities. These exposures are all Stage 1. There are immaterial Stage 2 and Stage 3 exposures outside of loans and advances to customers which are small relative to the balance sheet, where loans and advances to customers (including committed facilities) account for greater than 98.9% of overall ECLs.

### An analysis of gross credit and counterparty exposures

£'million	30 Sept 2018	1 April 2018
Cash and balances at central banks	3 882	3 480
Loans and advances to banks	1 090	1 004
Reverse repurchase agreements and cash collateral on securities borrowed	681	750
Sovereign debt securities	1 288	1 155

Reverse repurchase agreements and cash collateral on securities borrowed	681	24	657	–	–	681
Sovereign debt securities	1 288	201	1 087	–	–	1 288
Bank debt securities	55	55	–	–	–	55
Other debt securities	357	189	168	–	–	357
Derivative financial instruments	536	536	–	–	49	585
Securities arising from trading activities	496	496	–	–	287	783
Investment portfolio	–	–	–	–	473*	473
Loans and advances to customers	10 219	914	9 305	(163)	–	10 056
Other loans and advances	188	–	188	–	29	217
Other securitised assets	8	8	–	–	119^^	127
Interest in associated undertakings	–	–	–	–	51	51
Deferred taxation assets	–	–	–	–	157	157
Other assets	53	–	53	–	1 268**	1 321
Property and equipment	–	–	–	–	101	101
Investment properties	–	–	–	–	15	15
Goodwill	–	–	–	–	356	356
Intangible assets	–	–	–	–	95	95
<b>Total on-balance sheet exposures</b>	<b>18 853</b>	<b>2 423</b>	<b>16 430</b>	<b>(164)</b>	<b>3 001</b>	<b>21 690</b>
Guarantees	65	–	65	–	–	65
Committed facilities related to loans and advances to customers	1 368	23	1 345	(3)	–	1 365
Contingent liabilities, letters of credit and other	210	–	210	–	59	269
<b>Total off-balance sheet exposures</b>	<b>1 643</b>	<b>23</b>	<b>1 620</b>	<b>(3)</b>	<b>59</b>	<b>1 699</b>
<b>Total exposures</b>	<b>20 496</b>	<b>2 446</b>	<b>18 050</b>	<b>(167)</b>	<b>3 060</b>	<b>23 389</b>

<sup>^</sup> Expected credit losses include £1.9 million ECL held against financial assets held at FVOCI, which is reported on the balance sheet within reserves. This will result in minor differences between certain balance sheet lines reported above (largely loans and advances to customers and sovereign debt securities) and the statutory balance sheet.

\* Largely relates to exposures that are classified as investment risk in the banking book.

^^ While the group manages all risks (including credit risk) from a day-to-day operational perspective, certain assets are within special purpose vehicles that ring-fence the assets to specific credit providers and limit security to the assets in the vehicle. This balance reflects the credit exposure to credit providers external to the group. The net credit exposure that the group has in the vehicles is reflected in 'total credit and counterparty exposure'.

\*\* Other assets include settlement debtors which we deem to have no credit risk exposure as they are settled on a delivery against payment basis.

## Risk management

## An analysis of gross core loans and advances to customers, asset quality and ECL

The tables that follow provide information with respect to the asset quality of our gross core loans and advances on a statutory basis. Our exposure (net of ECL) to the Legacy portfolio\* has further reduced from £256 million at 1 April 2018 to £189 million at 30 September 2018. These assets are substantially impaired and are largely reported under Stage 3 as indicated below.

### An analysis of gross core loans and advances to customers subject to ECL by stage

£'million	30 Sept 2018	1 April 2018
<b>Gross core loans and advances to customers subject to ECL</b>	<b>9 305</b>	<b>8 901</b>
Stage 1	8 375	7 743
Stage 2	542	594
<i>of which past due greater than 30 days</i>	19	18
Stage 3	388	564
<i>of which Ongoing (excluding Legacy) Stage 3*</i>	193	221
<b>Gross core loans and advances to customers subject to ECL (%)</b>		
Stage 1	90.0%	87.0%
Stage 2	5.8%	6.7%
Stage 3	4.2%	6.3%
<i>of which Ongoing (excluding Legacy) Stage 3*</i>	2.1%	2.6%

### An analysis of ECL impairments on gross core loans and advances to customers subject to ECL

£'million	30 Sept 2018	31 March 2018 <sup>^</sup>
ECL impairment charges on core loans and advances	(19)	–
Average gross core loans and advances to customers subject to ECL	9 103	–
Income statement charge for impairments on core loans and advances	–	(106)
Average gross core loans and advances to customers	–	9 293
<b>Annualised credit loss ratio</b>	<b>0.41%</b>	<b>1.14%</b>

£'million	30 Sept 2018	1 April 2018
<b>ECL</b>	<b>(163)</b>	<b>(248)</b>
Stage 1	(14)	(15)
Stage 2	(38)	(41)
Stage 3	(111)	(192)
<i>of which Ongoing (excluding Legacy) Stage 3*</i>	(39)	(45)
<b>ECL coverage ratio (%)</b>		
Stage 1	0.2%	0.2%
Stage 2	7.0%	6.9%
Stage 3	28.6%	34.0%
<i>of which Ongoing (excluding Legacy) Stage 3*</i>	20.2%	20.4%

\* Ongoing information, as separately disclosed from 2014 to 2018, excludes Legacy, which comprises of pre-2008 assets held on the balance sheet, that had low/negative margins and assets relating to business we are no longer undertaking.

<sup>^</sup> Comparative information has been presented on an IAS 39 basis. On adoption of IFRS 9 there is a move from incurred loss model to an expected credit loss methodology.

## Risk management

### A further analysis of Stage 3 gross core loans and advances to customers subject to ECL

£'million	30 Sept 2018	1 April 2018
Stage 3 net of ECL	277	372
<i>of which Ongoing (excluding Legacy) Stage 3*</i>	154	176
Aggregate collateral and other credit enhancements on Stage 3	297	414
Stage 3 net of ECL and collateral	–	–
Stage 3 as a % of gross core loans and advances to customers subject to ECL	4.2%	6.3%
<i>of which Ongoing (excluding Legacy) Stage 3*</i>	2.1%	2.6%
Total ECL impairments as a % of Stage 3 exposure	42.0%	44.0%
Stage 3 net of ECL as a % of net core loans and advances to customers subject to ECL	3.0%	4.3%
<i>of which Ongoing (excluding Legacy) Stage 3*</i>	1.7%	2.0%

\* Ongoing information, as separately disclosed from 2014 to 2018, excludes Legacy, which comprises of pre-2008 assets held on the balance sheet, that had low/negative margins and assets relating to business we are no longer undertaking.

**Stage 1:** 90.0% of gross exposure subject to ECL is in Stage 1 and has not experienced a significant increase in credit risk since origination. ECL is calculated based on a 12-month expected loss. Coverage for these performing, non-deteriorated assets is 0.2%.

**Stage 2:** 5.8% of gross exposure is in Stage 2 and has seen a significant increase in credit risk since origination. These assets require a lifetime expected loss to be held. Only £18.6 million or 0.2% of gross core loans shown in Stage 2 are greater than 30 days past due. An asset reported in Stage 2 does not imply we expect a loss on these assets. Stage 2 assets are assessed relative to their expected performance at the point of origination. While assets may underperform original expectations, the level of ECL indicates that our expected losses from these positions remain low.

**Stage 3:** 4.2% of gross exposure is in Stage 3 which is made up of assets that are credit impaired. This has reduced from 6.3% at 1 April 2018 as we continue to make progress in reducing Legacy loans. Coverage ratio totals 28.6% and the remaining net exposure is considered well covered by collateral. The legacy portfolio is predominantly reported in Stage 3 and makes up 50.4% of Stage 3 gross loans. These assets have been significantly provided for and coverage for these assets remains high at 36.9%. Excluding Legacy, Ongoing Stage 3 exposures total £193 million or 2.1% of gross core loans and advances to customers subject to ECL. This has reduced from 2.6% at 1 April 2018.

## An analysis of staging and ECL movements for core loans and advances to customers subject to ECL

The table below indicates underlying movements in gross core loans and advances to customers subject to ECL from 1 April 2018 to 30 September 2018. The transfers between stages of gross core loans indicates the impact of stage transfers upon the gross exposure and associated opening ECL. The net remeasurement of ECL arising from stage transfers represents the (increase)/decrease in ECL due to these transfers. New lending net of repayments comprises new originations, further drawdowns, repayments and sell-downs as well as ECLs in Stage 3 that have been written off, typically when an asset has been sold. The ECL impact of changes to risk parameters and models during the period largely relates to the reduction in the bank's model overlay from £25 million to £17 million. Foreign exchange and other category largely comprises impact on the closing balance as a result of movements in foreign exchange rates since the opening date, 1 April 2018. Further analysis as at 30 September 2018 of gross core loans and advances to customers subject to ECL and their ECL balances is shown in 'An analysis of core loans and advances by risk category' on the following page.

	Stage 1		Stage 2		Stage 3		Total

## Risk management

(continued)

### An analysis of core loans and advances by risk category

Legacy exposures are included in gross core loans and advances at amortised cost and FVOCI in the table below, and largely relate to lending collateralised by property. These exposures account for a significant portion of Stage 3 assets. If these exposures were to be excluded from the table £82.5 million or 0.9% of total Ongoing gross loans subject to ECL, would be reported as Stage 3 lending collateralised by property (1 April 2018: £89.2 million or 1.0%).

## Risk management

(continued)

### Key drivers of measurement uncertainty – subjective elements and inputs

The measurement of ECL under IFRS 9 has increased complexity and reliance on expert credit judgements. Key judgemental areas under the implementation of IFRS 9 are highlighted in this document and are subject to robust governance processes. Key drivers of measurement uncertainty include:

- the assessment of what constitutes a significant increase in credit risk;
- the introduction of a range of forward-looking probability weighted macro-economic scenarios; and
- estimation of probabilities of default, loss given default and exposures at default using models.

In addition to these drivers, some initial judgements and assumptions were required in the design and build of the group's ECL methodology, which are not considered to have a material impact. This includes the use of income recognition effective interest rates (EIRs) that are calculated under IAS 39 and used as the discount factor in the IFRS 9 ECL calculation as well as the use of contractual maturity to assess behavioural lives. In addition where we have experienced limitations on the availability of probability of default origination data for the historic book a portfolio average has been used in some instances.

We will continue to assess and monitor the group's measurement uncertainty and sensitivity to changes in economic credit conditions and expect to provide additional disclosures relating to sensitivities in the 2019 Annual Report.

### Forward-looking macro-economic scenarios

The measurement of ECL also requires the use of multiple economic scenarios to calculate an unbiased and a probability weighted forward-looking estimate. These scenarios are updated at least twice a year, or more frequently if there is a macro-economic shock or significant shift in expectations. The weighting of these scenarios for IFRS 9 as well as the scenarios themselves are discussed and approved in DLC Capital Committee, which forms part of the principal governance framework for macro-economic scenarios.

A number of forecast economic scenarios are considered for capital planning, stress testing (including Investec specific stress scenarios) and IFRS 9, including multiple scenarios.

IFRS 9 is likely to result in an increase in the volatility of provisions going forward, particularly for Stage 1 and Stage 2 assets as a result of macro-economic scenario changes. Sensitivities to macro-economic scenarios and factors form part of our overall risk monitoring.

### Management and measurement of credit and counterparty risk

Fundamental principles employed in the management of credit and counterparty risk include:

- A clear definition of our target market
- A quantitative and qualitative assessment of the creditworthiness of our counterparties
- Analysis of risks, including concentration risk (concentration risk considerations include asset class, industry, counterparty and geographical concentration)
- Decisions are made with reference to risk appetite limits
- Prudential limits
- Regular monitoring and review of existing and potential exposures once facilities have been approved
- A high level of executive involvement in decision-making with non-executive review and oversight
- Portfolio reviews and stress testing.

Within the credit approval process, internal and external ratings are included in the assessment of client quality.

A large proportion of the group's portfolio is not rated by external rating agencies. We place reliance upon internal consideration of counterparties and borrowers, and use ratings prepared externally where available as support in our decision-making process.

Regular reporting of credit and counterparty risk exposures within our operating units are made to management, the executives and the board at the group risk and capital committee (GRCC) and board risk and capital committee (BRCC). The board regularly reviews and approves the appetite for credit and counterparty risk, which is documented in risk appetite statements and policy documents. This is implemented and reviewed by the credit risk management teams in each jurisdiction. Credit policies have been updated and amended to include changes to reflect the implementation of IFRS 9.

Portfolio reviews and stress testing are undertaken on all material businesses, where the exposures are analysed to assess any migration in portfolio quality, highlight any vulnerabilities, identify portfolio concentrations and make appropriate recommendations, such as a reduction in risk appetite limits or specific exposures.

## Internal credit rating models and ECL methodology

Internal credit rating models have been developed to cover all material asset classes. These internal credit rating models are then used for IFRS 9 modelling but adjusted for key differences. Internal credit models calculate through the economic cycle losses whereas IFRS 9 requires 12-month or lifetime point-in-time losses based on conditions at the reporting date and multiple economic scenario forecasts of the future conditions over the expected lives.

## Process to determine expected credit loss

ECLs are calculated using three main components:

- a probability of default (PD);
- a loss given default (LGD); and
- the exposure at default (EAD).

Under IFRS 9, the 12-month and lifetime PDs represent the probability of a default occurring over the next 12 months or the lifetime of the financial exposures, respectively, based on conditions existing at the balance sheet date and future forecasted macro-economic conditions that affect credit risk.

The LGD represents losses expected on default, taking into account the mitigating effect of collateral, its expected value when realised and the time value of money. The forecast value for the collateral is also affected by the range of forward-looking probability weighted macro-economic scenarios.

The EAD represents the expected balance at default, taking into account the repayment of principal and interest from the balance sheet date to the default event together with any expected drawdown of a committed facility.

The calculation of the 12-month ECL is based on the 12-month PD and LGD along with the EAD and effective interest rate (EIR) for the asset. Lifetime ECL is calculated using the lifetime PD curve, and the appropriate LGDs and EADs and discount rates derived from the EIR based on the remaining life of the financial asset.

Expert judgement models have also been utilised for certain portfolios where the ECL is judged to be minimal, either due to the portfolio's relative size or the highly-rated nature of these portfolios, such as cash and balances held at central banks.

Management adjustments are made to modelled output to account for situations where additional information and known or expected risk factors have not been captured in the modelling process.

A management overlay of £17 million (£25 million at 1 April 2018) has been considered appropriate in addition to the bank's calculated model-driven ECL. This is due to Investec plc's limited experience of utilising model output for reporting purposes and uncertainty over the models' predictive capability. The overlays have been designed to capture specific areas of model uncertainty during the initial adoption of IFRS 9. The model methodologies have been enhanced during the period and therefore the management overlay has been commensurately reduced at 30 September 2018 to reflect the lower level of model uncertainty. The bank will continue to assess the appropriateness of this management overlay and expect that it will continue to be unwound as the uncertainty of the models predictive capability reduces.

## Risk management

(continued)

### Investment risk in the banking book

Investment risk in the banking book arises primarily from the following activities conducted within the group:

- **Principal investments:** Principal investments are normally undertaken in support of a client requiring equity to grow and develop an existing business, or the acquisition of a business from third parties. Investments are

selected based on the track record of management, the attractiveness of the industry and the ability to build value for the existing business by implementing an agreed strategy. Investments in listed shares may arise on the IPO, or sale of one of our investments. Additionally, listed investments may be considered where we believe that the market is mispricing the value of the underlying security

- **Lending transactions:** The manner in which we structure certain transactions results in equity, warrant and profit shares being held, predominantly within unlisted companies
- **Property activities:** We source development, investment and trading opportunities to create value and trade for profit within agreed risk parameters.

The table below provides an analysis of income and revaluations recorded with respect to these investments

£'000 Category	Income/(loss) (pre-funding costs)				Fair value through equity/OCI
	Unrealised*	Realised*	Dividends	Total	
<b>For the six months to 30 September 2018</b>					
Unlisted investments	(812)	17 307	2 285	18 780	–
Listed equities	(24 101)	1 068	95	(22 938)	–
Investment and trading properties	(3 505)	–	–	(3 505)	–
Warrants and profit shares	(11 982)	18 214	–	6 232	–
<b>Total</b>	<b>(40 400)</b>	<b>36 589</b>	<b>2 380</b>	<b>(1 431)</b>	<b>–</b>
<b>For the six months to 30 September 2017</b>					
Unlisted investments	8 918	10 129	5 975	25 022	556
Listed equities	(13 373)	(1 996)	2	(15 367)	1 564
Investment and trading properties	(2 663)	1 601	–	(1 062)	–
Warrants, profit shares and other embedded derivatives	(1 961)	–	–	(1 961)	–
<b>Total</b>	<b>(9 079)</b>	<b>9 734</b>	<b>5 977</b>	<b>6 632</b>	<b>2 120</b>

\* In a year of realisation, any prior period mark-to-market gains/losses recognised are reversed in the unrealised line item.

## Summary of investments held and stress testing analyses

The balance sheet value of investments is indicated in the table below.

£ million Category	On-balance sheet value of investments 30 September 2018	Valuation change stress test 30 September 2018*	On-balance sheet value of investments 1 April 2018	Valuation change stress test 1 April 2018*
Unlisted investments	434	65	417	63
Listed equities	39	10	61	15
<b>Total investment portfolio</b>	<b>473</b>	<b>75</b>	<b>478</b>	<b>78</b>
Investment and trading properties	164	31	113	21
Warrants and profit shares	11	4	22	8
<b>Total</b>	<b>648</b>	<b>110</b>	<b>613</b>	<b>107</b>

\* In order to assess our earnings sensitivity to a movement in the valuation of these investments the following stress testing parameters are applied:

Stress test values applied	
Unlisted investments	15%
Listed equities	25%
Trading properties	20%
Investment properties	10%
Warrants and profit shares	35%

## Stress testing summary

Based on the information at 30 September 2018, as reflected above, we could have a £110 million reversal in revenue (which assumes a year in which there is a 'severe stress scenario' simultaneously across all asset classes). This would not necessarily cause the group to report a loss, but could have a significantly negative impact on earnings for that period. The probability of all these asset classes in all geographies in which we operate being negatively impacted at the same time is very low, although the probability of listed equities being negatively impacted at the same time is very high.

## An analysis of the investment portfolio, warrants and profit shares

### 30 September 2018

£484 million

Real estate	33.5%
Manufacturing and commerce	20.0%
Finance and insurance	18.4%
Communication	9.1%
Retailers and wholesalers	8.8%
Mining and resources	4.4%
Transport	4.4%
Business services	0.8%
Other	0.6%

## Risk management

(continued)

### Securitisation/structured credit activities exposures

The group's definition of securitisation/structured credit activities (as explained below) is wider than the definition as applied for regulatory capital purposes, which largely focuses on those securitisations in which the group has achieved significant risk transfer. We, however, believe that the information provided below is meaningful in that it groups all these related activities in order

for a reviewer to obtain a fuller picture of the activities that we have conducted in this space. Some of the information provided below overlaps with the group's credit and counterparty exposure information.

The primary focus for new securitisation transactions remains to provide a cost-effective, alternative source of financing to the bank.

During the six months to September 2018 we did not undertake any new securitisation transactions. We hold

rated structured credit instruments. These exposures are largely in the UK and US and amount to £343 million at 30 September 2018 (1 April 2018: £266 million).

### Credit analysis

In terms of our analysis of our credit and counterparty risk, exposures arising from securitisation/structured credit activities reflect only those exposures to which we consider ourselves to be at risk.

Nature of exposure/activity	Exposure 30 Sept 2018 £'million	Exposure 1 April 2018 £'million	Balance sheet and credit risk classification
Structured credit (gross exposure)*	353	276	Other debt securities and other loans and advances
Rated	343	266	
Unrated	10	10	
Loans and advances to customers and third party intermediary originating platforms (mortgage loans) – (net exposure)	–	130	Other loans and advances

### \*Analysis of rated and unrated structured credit

## Market risk in the trading book

Traded market risk is the risk of potential changes in the value of the trading book as a result of changes in market risk factors such as interest rates, equity prices, exchange rates, commodity prices, credit spreads and their underlying volatilities where derivatives are traded. The trading book is defined as positions in financial instruments and commodities, including derivative products and other off-balance-sheet instruments that are held within the trading businesses.

The focus of our trading activities is primarily on supporting client activity. Our strategic intent is that proprietary trading should be limited and that trading should be conducted largely to facilitate client flow. Within our trading activities, we act as principal with clients or the market. Market risk exists where we have taken on principal positions resulting from market making, underwriting and facilitation of client business in the foreign exchange, interest rate, equity, credit and commodity markets.

### Measurement of traded market risk

A number of quantitative measures are used to monitor and limit exposure to traded market risk. These measures include:

- Value at Risk (VaR) and Expected Shortfall (ES) as portfolio measures of market risk exposure
- scenario analysis, stress tests and tools based on extreme value theory (EVT) that measure the potential impact on portfolio values of extreme moves in markets
- sensitivity analysis that measures the impact of individual market risk factor movements on specific instruments or portfolios, including interest rates, foreign exchange rates, equity prices, credit spreads and commodity prices, such as the effect of a one basis point change in interest rates. We use sensitivity measures to monitor and limit exposure across portfolios, products and risk types.

Stress and scenario analyses are used to add insight into the possible outcomes under severe market disruptions. The stress-testing methodology assumes that all market factors move adversely at the same time and that no actions are taken during the stress events to mitigate risk. Stress scenarios based on historical experience as well as hypothetical scenarios are considered and are reviewed regularly for relevance in ever-changing market environments. Stress scenarios are run daily with analysis presented weekly to Review ERRF or more often depending on market conditions.

### Value at Risk

VaR is a technique that estimates the potential losses as a result of movements in market rates and prices over a specified time horizon at a given level of confidence. The VaR model derives future scenarios from past time series of market rates and prices, taking into account inter-relationships between the different markets such as interest rates and foreign exchange rates.

VaR numbers using a one-day holding period are monitored daily at the 95% and 99% confidence intervals, with limits set at the 95% confidence interval. Expected Shortfalls are also monitored daily at the 95% and 99% levels as is the worst case loss in the VaR distribution.

The table below contains the 95% one-day VaR figures for the trading businesses.

	30 September 2018				31 March 2018			
£'000	Period end	Average	High	Low	Year end	Average	High	Low
<b>(Using 95% one-day VaR)</b>								
Equities	423	435	567	327	495	519	746	345
Foreign exchange	1	8	31	1	18	17	80	1
Interest rates	82	77	92	70	81	84	147	67
Credit	59	42	89	23	23	90	184	16
<b>Consolidated*</b>	<b>407</b>	<b>433</b>	<b>557</b>	<b>350</b>	<b>502</b>	<b>509</b>	<b>740</b>	<b>311</b>

\* The consolidated VaR is lower than the sum of the individual VaRs. This arises from the consolidation offset between various asset classes (diversification).

## Risk management

(continued)

### Expected shortfall

The ES measure overcomes some of VaR's shortcomings. ES seeks to quantify losses encountered in the tail beyond the VaR level. The 95% one-day ES is the average loss given that the 95% one-day VaR level has been exceeded. The table below contains the 95% one-day ES figures.

95% (one-day) £'000	30 Sept 2018	31 March 2018
Equities	662	655
Foreign exchange	7	26
Interest rates	124	113
Credit	83	35
<b>Consolidated*</b>	<b>663</b>	<b>661</b>

\* The consolidated ES is lower than the sum of the individual ESs. This arises from the correlation offset between various asset classes (diversification).

### Stressed VaR

Stressed VaR (sVaR) is calculated using the VaR model but based on a one year period through which the relevant market factors experienced stress. The information in the table below contains the 99% one-day sVaR.

£'000	30 Sept 2018 Period end	31 March 2018 Year end
<b>99% one-day sVaR</b>	<b>2 015</b>	<b>1 541</b>

### Backtesting

The graph that follows shows the result of backtesting the total daily 99% one-day VaR against the clean profit and loss figures for our trading activities over the reporting period. The primary focus of trading activity is the hedging of client flow and the clean profit and loss excludes items such as fees and hedge costs included in new trades revenue. Based on this graph, we can gauge the accuracy of the VaR figures i.e. 99% of the time, the total trading activities are not expected to lose more than the 99% one-day VaR.

The average VaR for the period ended 30 September 2018 was slightly lower than the previous year. Using clean profit and loss data for backtesting resulted in three exceptions over the period at the 99% confidence level, i.e. where the loss was greater than the 99% one-day VaR. This is more than expected at the 99% level and is due to increase volatility experienced in the equity markets.

### 99% one-day VaR backtesting

## Stress testing

The table below indicates the potential losses that could arise if the portfolio is stress tested under extreme market conditions. The method used is known as extreme value theory (EVT), the reported stress scenario below calculates the 99% EVT which is a 1-in-8 year possible loss event. These numbers do not assume normality but rather rely on fitting a distribution to the tails of the VaR distribution.

£'000	30 Sept 2018 Period end	31 March 2018 Year end
<b>(Using 99% EVT)</b>		
Equities	1 964	1 475
Foreign exchange	36	66
Interest rates	276	226
Credit	205	83
<b>Consolidated*</b>	<b>1 757</b>	<b>1 441</b>

\* The consolidated stress test number is lower than the sum of the individual stress test numbers. This arises from the correlation offset between various asset classes (diversification).

## Clean profit and loss histogram

Given that the primary focus of trading activity is the hedging of client flow, the below histogram excludes the fees and hedge costs included in new trades revenue. The histogram illustrates the distribution of clean profit and loss during the period for our trading businesses. The clean profit and loss was positive on 58 days out of a total of 126 days with the daily average for the six months to 30 September 2018 at £5 349 (six months to 30 September 2017: £60 579). Trading activity was adversely impacted by difficult market conditions during the second half of the six month period.

## Clean profit and loss (excluding fees and hedge costs included in new trades revenue)

# Risk management

(continued)

## Balance sheet risk management

Balance sheet risk encompasses the financial risks relating to our asset and liability portfolios, comprising liquidity, funding, concentration, encumbrance and non-trading interest rate risk.

### Liquidity risk

Liquidity risk refers to the possibility that, despite being solvent, we have insufficient capacity to fund increases in assets, or are unable to meet our payment obligations as they fall due in normal and stressed conditions. This includes repaying depositors or maturing wholesale debt. This risk arises from mismatches in the timing of cash-flows, and is inherent in all banking operations and can be impacted by a range of institution-specific and market-wide events.

#### Liquidity risk is further broken down into:

- **Funding liquidity:** this relates to the risk that the bank will be unable to meet current and/or future cash flows or collateral requirements in the normal course of business, without adversely affecting its financial position or its reputation
- **Market liquidity:** this relates to the risk that the bank may be unable to trade in specific markets or that it may only be able to do so with difficulty due to market disruptions or a lack of market liquidity.

### Cash and near cash trend

### An analysis of cash and near cash at 30 September 2018

£6 456 million

Near cash (other 'monetisable' assets)	5.0%
Central Bank cash placements and guaranteed liquidity	76.0%
Cash	19.0%

### Bank and non-bank depositor concentration by type at 30 September 2018

£13 813 million

Individuals	52.7%
Non-financial corporates	32.3%
Small business	10.4%
Banks	4.6%

## Contractual liquidity

With respect to the contractual liquidity table below, we record all assets and liabilities with the underlying contractual maturity as determined by the cash flow profile for each deal.

With respect to the behavioural liquidity gap, we adjust the contractual profile of certain assets and liabilities:

- *Liquidity buffer*: the actual contractual profile of the assets in the liquidity buffer is of little consequence, as practically Investec would meet any unexpected net cash outflows by repo'ing or selling these highly liquid securities. Consequently, for the liquidity buffer:
  - The time horizon to monetise our regulatory liquid assets which are guaranteed by the central bank has been adjusted to 'on demand'; and
  - The time horizon for the cash and near cash portfolio of 'available-for-sale' discretionary treasury assets has been set to one month where there are deep secondary markets for this elective asset class.
- *Customer deposits*: the contractual repayments of many deposits are on demand, or at notice, but in reality withdrawals vary significantly from this. Historical observations of the products are used to model the behavioural lives, and this analysis has identified significant additional sources of structural liquidity in the form of core deposits that exhibit stable behaviour.

### Contractual liquidity at 30 September 2018

## Regulatory requirements

Since 1 January 2018, banks within the EU have been required to maintain a minimum LCR ratio of 100%. For both Investec plc and Investec Bank plc (solo basis), the LCR is calculated following the European Commission Delegated Regulation 2015/61 and our own interpretations where the regulation calls for it. The reported LCR may change over time with updates to our methodologies and interpretations.

The BCBS published their final paper on NSFR in October 2014. In November 2016, the European Commission released a number of proposals amending the CRR referred to as the 'CRR2/CRDV' package. This includes a number of EU specificities with respect to the NSFR. The implementation date of the ratio will be two years after the date entry into force of the proposed regulation, at which point banks will be required to maintain a minimum NSFR of 100%. The NSFR therefore remains subject to an observation period in advance of such implementation and we will continue to monitor these rules until final implementation. The internally calculated NSFR for Investec plc and Investec Bank plc (solo basis) is based upon the BCBS paper and our own internal interpretations, as such, it is subject to change in response to regulatory updates and our methodologies.

For Investec plc and Investec Bank plc (solo basis), the LCR is calculated using our own interpretations of the EU Delegated Act. The LCR reported to the PRA at 30 September 2018 was 332% for Investec plc and 339% for Investec Bank plc (solo basis) which is well ahead of the regulatory minimum of 100%. Ahead of the implementation of the final NSFR rules, the group has applied its own interpretations of regulatory guidance and definitions from the BCBS final guidelines, to calculate the NSFR which was 140% for Investec plc and 134% for Investec Bank plc (solo basis) well ahead of the future regulatory minimum of 100%. The reported LCR and NSFR may change over time with regulatory developments and guidance.

Investec plc undertakes an annual Individual Liquidity Adequacy Assessment Process (ILAAP) which documents the approach to liquidity management across the firm.

This document is reviewed and approved by the board before being provided to the PRA for use, alongside the Liquidity Supervisory Review and Evaluation Process, to determine the bank's Individual Liquidity Guidance, also known as a Pillar 2 requirement.

## Non-trading interest rate risk description

Non-trading interest rate risk, otherwise known as interest rate risk in the banking book, arises from the impact of adverse movements in interest rates on both net interest earnings and economic value of equity.

Sources of interest rate risk include:

- **Repricing risk:** arises from the timing differences in the fixed rate maturity and floating rate repricing of bank assets, liabilities and off-balance sheet derivative positions. This affects the interest rate margin realised between lending income and borrowing costs when applied to our rate sensitive portfolios
- **Yield curve risk:** repricing mismatches also expose the bank to changes in the slope and shape of the yield curve
- **Basis risk:** arises from imperfect correlation in the adjustments of the rates earned and paid on different instruments with otherwise similar repricing characteristics
- **Embedded option risk:** arises from optional elements embedded in items where the bank or its customers can alter the level and timing of their cash flows
- **Endowment risk:** refers to the interest rate risk exposure arising from the net differential between interest rate insensitive assets, interest rate insensitive liabilities and capital.

The above sources of interest rate risk affect the interest rate margin realised between lending income and borrowing costs, when applied to our rate sensitive asset and liability portfolios, which has a direct effect on future net interest earnings and the economic value of equity.

## Interest rate sensitivity gap

The table below shows our non-trading interest rate mismatch at 30 September 2018. These exposures affect the interest rate margin realised between lending income and borrowing costs assuming no management intervention.

£'million	Not > three months	> Three months but < six months	> Six months but < one year	> One year but < five years	> Five years	Non-rate	Total non- trading
Cash and short-term funds – banks	4 951	–	–	–	–	–	4 951

Cumulative repricing gap	2 018	1 545	806	661	682	–	–

## Economic value sensitivity at 30 September 2018

As outlined above, non-trading interest rate risk is measured and monitored using an economic value sensitivity approach. The table below reflects our economic value sensitivity to a 2% parallel shift in interest rates assuming no management intervention. The numbers represent the change to the value of the interest rate sensitive portfolios should such a hypothetical scenario arise. This sensitivity effect does not have a significant direct impact on our equity.

### Sensitivity to the following interest rates (expressed in original currencies)

million	GBP	USD	EUR	AUD	ZAR	Other (GBP)	All (GBP)
200bps down	7.8	(1.1)	3.3	(2.2)	(2.5)	(0.5)	8.0
200bps up	(5.0)	1.2	(2.6)	2.1	2.3	0.5	(4.7)

# Capital adequacy

## Capital structure and capital adequacy

£'million	30 Sept 2018*	1 April 2018	31 March 2018*
<b>Tier 1 capital</b>			
Shareholders' equity	1 875	1 765	1 977
Shareholders' equity excluding non-controlling interests	1 960	1 863	2 075

Defined benefit pension fund adjustment	(3)	(3)	(3)
Additional value adjustments	(5)	(4)	(4)
Gains or losses on liabilities at fair value resulting from changes in our credit standing	11	55	–
Adjustment under IFRS 9 transitional arrangements	95	94	–
<b>Deductions</b>	<b>(456)</b>	<b>(460)</b>	<b>(460)</b>
Goodwill and intangible assets net of deferred taxation	(442)	(447)	(447)
Deferred taxation assets that rely on future profitability excluding those arising from temporary differences	(9)	(9)	(9)
Securitisation positions	(4)	(3)	(3)
Debt valuation adjustment	(1)	(1)	(1)
<b>Common equity tier 1 capital</b>	<b>1 525</b>	<b>1 459</b>	<b>1 522</b>
<b>Additional Tier 1 capital</b>	<b>274</b>	<b>274</b>	<b>274</b>
Additional tier 1 instruments	274	274	274
<b>Tier 1 capital</b>	<b>1 799</b>	<b>1 733</b>	<b>1 796</b>
<b>Tier 2 capital</b>	<b>491</b>	<b>368</b>	<b>359</b>
Tier 2 instruments	627	446	446
Non-qualifying surplus capital attributable to non-controlling interests	(136)	(78)	(87)
<b>Total regulatory capital</b>	<b>2 290</b>	<b>2 101</b>	<b>2 155</b>
<b>Risk-weighted assets<sup>^^</sup></b>	<b>15 111</b>	<b>14 444</b>	<b>14 411</b>
<b>Capital ratios<sup>^^</sup></b>			
Common equity tier 1 ratio	10.1%	10.1%	10.6%
Tier 1 ratio	11.9%	12.0%	12.5%
Total capital ratio	15.2%	14.5%	15.0%

\* The capital adequacy disclosures for Investec plc include the deduction of foreseeable charges and dividends when calculating common equity tier (CET) 1 capital as required under the Capital Requirements Regulation and European Banking Authority technical standards. These disclosures are different to the capital adequacy disclosures included in the Interim Report, which follow our normal basis of presentation and do not include the deduction for foreseeable charges and dividends when calculating CET 1 capital. Investec plc's CET 1 ratio would be 30bps (31 March 2018: 45bps) higher on this basis.

<sup>^^</sup> CET 1, Tier 1 (T1), total capital adequacy ratios and risk-weighted assets are calculated applying the IFRS 9 transitional arrangements.

## Capital adequacy

Market risk	983	965	965
Operational risk	2 296	2 087	2 087

### Leverage

	30 Sept 2018	1 April 2018	31 March 2018
Exposure measure	23 987	21 771	21 772
Tier 1 capital <sup>oo</sup>	1 799	1 733	1 796
<b>Leverage ratio** – current</b>	<b>7.5%</b>	<b>8.0%</b>	<b>8.2%</b>
Tier 1 capital fully loaded	1 698	1 663	1 772
<b>Leverage ratio** – ‘fully loaded’<sup>^^</sup></b>	<b>7.1%</b>	<b>7.7%</b>	<b>8.1%</b>

### A summary of capital adequacy and leverage ratios

	30 Sept 2018*	1 April 2018	31 March 2018*
Common equity tier 1 (as reported) <sup>oo</sup>	10.1%	10.1%	10.6%
Common equity tier 1 (‘fully loaded’) <sup>^^</sup>	9.7%	9.8%	10.6%
Tier 1 (as reported) <sup>oo</sup>	11.9%	12.0%	12.5%
Total capital adequacy ratio (as reported) <sup>oo</sup>	15.2%	14.5%	15.0%
Leverage ratio** – current	7.5%	8.0%	8.2%
Leverage ratio** – (‘fully loaded’) <sup>^^</sup>	7.1%	7.7%	8.1%
Leverage ratio – current UK leverage ratio framework <sup>^^^</sup>	8.9%	9.5%	9.8%

\* The capital adequacy disclosures for Investec plc include the deduction of foreseeable charges and dividends when calculating CET 1 capital as now required under the Capital Requirements Regulation and European Banking Authority technical standards. These disclosures are different to the capital disclosures included in the Interim Report, which follows our normal basis of presentation and do not include the deduction for foreseeable charges and dividends when calculating CET 1 capital. Investec plc’s CET 1 ratio would be 30bps (31 March 2018: 45bps) higher on this basis.

\*\* The leverage ratios are calculated on an end-quarter basis.

<sup>^^</sup> Based on the group’s understanding of current regulations, ‘fully loaded’ is based on CRR requirements as fully phased in by 2022, including full adoption of IFRS 9. As a result of the adoption of IFRS 9 Investec plc elected to designate its subordinated fixed rate medium-term notes due in 2022 at fair value. By the time of full adoption of IFRS 9 in 2023, these subordinated liabilities will have reached final maturity and will be redeemed at par value. The remaining interest rate portion of the fair value adjustment at 30 September 2018 of £18 million (post taxation), has therefore been excluded from the fully loaded ratios as it will be released into profit and loss over the remaining life of the instrument.

<sup>^^^</sup> Investec plc is not subject to the UK leverage ratio framework, however, due to recent changes to the UK leverage ratio framework to exclude from the calculation of the total exposure measure those assets constituting claims on central banks where they are matched by deposits accepted by the firm that are denominated in the same currency and of identical or longer maturity, this has been included for comparative purposes.

<sup>oo</sup> The reported CET 1, T1, total capital adequacy amounts and ratios are calculated applying the IFRS 9 transitional arrangements.
