1. Overview

1.1 Background

This document sets out the Pillar 3 disclosures for Secure Trust Bank PLC and its subsidiaries ('the Group') as at 31 December 2021. These disclosures provide information on the capital requirements and on the management of key risks faced by the Group. These are designed to promote market discipline through the disclosure of key information about risk exposures and risk management processes, as well as remuneration.

The Basel framework consists of three pillars:

- **Pillar 1**: Defines the minimum capital requirements that institutions are required to hold for credit, market and operational risks.
- **Pillar 2**: This builds on Pillar 1 and incorporates the Group's own assessment of additional capital resources needed to cover specific risks that are not covered by the minimum regulatory capital resources requirement set out under Pillar 1. The amount of any additional capital requirement is also assessed by the Prudential Regulation Authority (PRA) during its Supervisory Review and Evaluation Process ('SREP') and is used to determine the overall capital resources required by the Group.
- **Pillar 3**: Aims to improve market discipline by requiring banks to publish information on their principal risks, capital structure and risk management.

1.2 Basis of disclosures

The disclosures have been prepared for the Group and cover the applicable Pillar 3 qualitative and quantitative disclosure requirements. They have been prepared to explain the basis upon which the Group has prepared and disclosed certain capital requirements and information about the management of certain risks and for no other purpose.

Preparation is in accordance with the rules laid out in Capital Requirements Regulation ('CRR') Part Eight and the Group's policy describing internal controls and processes around preparation of this document. They do not constitute any form of the financial statements and must not be relied upon in making any judgement on the Group.

This document reflects the disclosure requirements applicable as at 31 December 2021.

The Group has six subsidiaries:

- Debt Management (Services) Ltd ('DMS')
- Secure Homes Services Ltd
- STB Leasing Ltd
- V12 Finance Group Ltd
- V12 Retail Finance Limited
- V12 Personal Finance Limited dormant

Regulatory capital ratios are calculated on both a Group and an Individual Consolidated (or 'solo') basis.

The Group has been granted permission by the PRA to include all Group entities for Individual Consolidation purposes.

The basis of consolidation for the Group is the same for accounting and prudential purposes.

There is no current or foreseen material practical or legal impediment to the prompt transfer of own funds or repayment of liabilities among the Group's parent undertaking or subsidiaries.

The Group adopts the standardised approach to calculate the capital requirements for credit risk, operational risk and counterparty credit risk. Throughout the document, unless otherwise specified, credit risk exposures are defined as the aggregate of drawn (on-balance sheet) balances, undrawn (off-balance sheet) commitments and contingent liabilities prior to the application of credit risk mitigation ('CRM'), and credit conversion factors ('CCF'), and after IFRS 9 provisions.

1.3 Content of Report and Frequency

The Pillar 3 report is issued annually in conjunction with the Annual Report and Accounts. Where there is a material change in any approach used for the calculation of capital, the business structure or regulatory requirements, the frequency of disclosure will be reviewed.

Where appropriate, cross references have been made to supporting disclosures that are included within the 2021 Annual Report and Accounts. As such, these disclosures should be read in conjunction with that document.

The Group does not disclose all quantitative metrics and figures relating to its risk appetite, as they are considered to be proprietary information; those that are disclosed can be viewed in the Strategic Report in the Group's 2021 Annual Report and Accounts.

1.4 Media and location

Pillar 3 disclosures are published on the Secure Trust Bank PLC corporate website (www.securetrustbank.com/investors).

1.5 Verification

The CRR requires creation of a formal policy to comply with Pillar 3 disclosure requirements and the Board has put in place such a policy. The Policy is reviewed by the Risk Committee (a committee of the Board) and approved on an annual basis by the Board.

The disclosures are subject to annual review by the Risk Committee and approval by Board.

The disclosures have not been, and are not required to be, subject to independent external audit and do not constitute any part of the Group's Annual Report and Accounts.

1.6 Changes in disclosure requirements

The reporting requirements are consistent with those in place for the prior year's report.

The CRR 'Quick Fix' measures introduced in June 2020 (Directive EU/2020/873) continued to be applied throughout 2021: enhanced IFRS 9 transitional relief, the exemption of prudently valued software from CET 1 deductions, and accelerated implementation of revised small and medium-sized enterprises (SME) supporting factors.

The 2020 comparatives have been restated to reflect a clarification issued by the IFRS Interpretations Committee in relation to the accounting treatment of Software as-a-Service arrangement. Details can be found in Note 1.3 to the financial statements in the Annual Report and Accounts.

A number of comparatives have also been restated to reflect a change in presentation for certain risk weighted asset classes. This has no impact on total risk weighted assets.

The following requirements came into force from 1 January 2022 and thus do not affect disclosures in this report:

During the year the PRA published PS22/21 'Implementation of Basel Standards: Final Rules'. The policy statement broadly aligns with the EU's Capital Requirements Regulation II and will affect the

Group's regulatory requirements in several areas, including amendments to the scope of Pillar 3 reporting requirements. The software deduction exemption currently applied will be withdrawn from 1 January 2022 as one of the measures implemented under this Policy Statement.

The PRA also published PS21/21 'The UK Leverage Ratio Framework' which also comes into force on 1 January 2022. The key changes include a supervisory expectation of maintaining a minimum leverage ratio of 3.25% for firms not subject to the UK Leverage Ratio Framework. Whilst the Group remains outside the scope of the full Leverage Ratio Framework, it adheres to the supervisory expectations in a similar manner to those falling within scope.

The Financial Policy Committee (FPC) announced during December 2021 that the UK Countercyclical Capital Buffer (CCyB) rate will be increased to 1% from 13 December 2022, having been reduced to 0% in March 2020 due to the COVID-19 pandemic. There is no impact on the current year disclosures.

2. Key Prudential Metrics and Risk Weighted Assets

	Including	Excluding	Including	Excluding
	IFRS 9	IFRS 9	IFRS 9	IFRS 9
	Transitional	Transitional	Transitional	Transitional
	Arrangement	Arrangement	Arrangement	Arrangement
	31 Dec 2021	31 Dec 2021	31 Dec 2020 ¹	31 Dec 2020 ¹
	£million	£million	£million	£million
Available capital				
Common Equity Tier 1 (CET 1)	303.6	289.7	280.8	253.9
Tier 1 capital	303.6	289.7	280.8	253.9
Total capital	350.6	336.4	325.9	298.5
Risk based capital ratios as a percentage of RWA				
Common Equity Tier 1 (CET 1) ratio (%)	14.5%	14.0%	14.0%	12.9%
Tier 1 ratio (%)	14.5%	14.0%	14.0%	12.9%
Total capital ratio (%)	16.8%	16.2%	16.3%	15.1%
Basel III leverage ratio				
Basel III leverage ratio (%)	10.3%	9.9%	10.3%	9.4%

^{1.} Prior year figures disclosed have been restated. See Note 1.3 of the Annual Report and Accounts for further information.

The CET 1 balance has increased by £22.8 million compared to December 2020 primarily due to the Group continuing to be profitable despite the challenges posed by the evolving economic backdrop and COVID-19 pandemic. As a result, all of the Group's key capital ratios improved over the year. The 2021 profit after tax £45.6 million has been offset by the £13.0 million reduction in capital benefit associated with IFRS 9 transitional provisions and the recommencement of dividend distributions. During the year the Group paid an interim dividend of £3.7 million and declared a final 2021 dividend of £7.7 million.

3. Governance

The Board is committed to maintaining and developing high standards of corporate governance. The Board endorses the principles of openness, integrity and accountability, which underlie good corporate governance. The Board establishes the Group's overall purpose, values and strategy and ensures the delivery of these within a robust corporate governance framework.

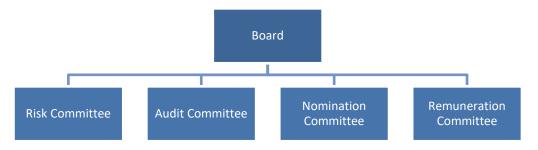

The Board is committed to the principles of corporate governance contained in the UK Corporate Governance Code issued by the Financial Reporting Council in July 2018. The Group is compliant on an ongoing basis with the Listing Rules and describes its compliance with the UK Corporate

Governance Code (the 'Code'), in the Corporate Governance Report in the Group's 2021 Annual Report and Accounts from page 56.

The Board discharges some of its responsibilities through, and is supported by, its Committees which provide oversight and make recommendations on the matters delegated to them by the Board.

The Board has established Nomination, Remuneration, Audit and Risk Committees, each with formally delegated duties and responsibilities and with written terms of reference. From time-to-time, other committees may be set up by the Board to consider specific issues when the need arises.

3.1 Board committees

Summary information on these committees is set out below.

3.1.1 Risk Committee

The Risk Committee reviews the design and implementation of risk management policies and risk related strategies and the procedures for monitoring the adequacy and effectiveness of this process. It considers the Group's risk appetite in relation to the current and future strategy of the Group; the Group's Internal Capital Adequacy Assessment Process ('ICAAP') and Internal Liquidity Adequacy Assessment Process ('ILAAP') and outputs from these; and exercises oversight of the risk exposures of the Group. The Risk Committee meets a minimum of four times a year, plus ad-hoc meetings as required. The report of the Risk Committee can be found on pages 70 to 75 of the Group's 2021 Annual Report and Accounts.

3.1.2 Audit Committee

The Audit Committee assists the Board in, amongst other matters, discharging its responsibilities regarding regulatory reporting and financial reporting. Its responsibilities include reviewing the Company's annual financial statements, reviewing and monitoring the extent of the non-audit work undertaken by external auditors, advising on the appointment, reappointment, removal and independence of external auditors, reviewing the effectiveness of the Company's internal audit activities, internal controls and risk management systems and reviewing the effectiveness of whistleblowing arrangements in adherence to the Financial Conduct Authority Rules on Whistleblowing, in addition to receiving issues raised via the whistleblowers' reporting lines. The Chairman of the Audit Committee is the Whistleblowers' Champion.

The ultimate responsibility for reviewing and approving the Annual Report and Accounts and the half-yearly reports remains with the Board. The Audit Committee meets formally at least four times a year and otherwise as required. The report of the Audit Committee can be found on pages 65 to 69 of the Group's 2021 Annual Report and Accounts.

The Group Committee framework and terms of reference formally approved by the Board, detailing the remit and delegated authorities are available to view on the Group website http://www.securetrustbank.com/investors/corporate-information/corporate-governance.

3.1.3 Nomination Committee

The Nomination Committee assists the Board in discharging its responsibilities relating to the structure, size and composition of the Board. The Nomination Committee is responsible for, amongst other matters, evaluating the balance of skills, knowledge, independence, experience and diversity of the Board, and makes recommendations to the Board on such matters. The Nomination Committee also considers succession planning for Directors and other senior Executives overseeing the development of a diverse pipeline for succession and taking into account the challenges and opportunities facing the Company, and the skills and expertise that will, therefore, be needed on the Board in future. The report of the Nomination Committee can be found on pages 62 to 64 of the Group's 2021 Annual Report and Accounts.

3.1.4 Remuneration Committee

The Remuneration Committee assists the Board in performing its responsibilities in relation to remuneration. Its responsibilities include making recommendations to the Board on the Company's policy on executive remuneration, determining the individual remuneration and benefits package of each of the Executive Directors, the Company Secretary, other members of the Executive Committee and other Material Risk Takers. In addition, the Committee can review and make recommendations regarding the terms and conditions of employment, remuneration and benefits, including pension rights, of other employees of the Group. The Remuneration Committee meets formally at least twice a year and otherwise as required. The report of the Remuneration Committee can be found starting on page 76 of the Group's 2021 Annual Report and Accounts.

3.2 Risk Management

A fundamental element of the Group's strategy is the effective management of risk to protect the Group's depositors, borrowers and shareholders, and to ensure that the Group maintains sufficient capital, liquidity and operational control at all times, and acts in a reputable way. This is reflected in the Group's strategy and values, in particular the 'Sustain' strategy and 'Risk Aware' value, which demonstrate the Group's commitment to protect the reputation, integrity and sustainability of the Group.

The Group's Chief Risk Officer is responsible for leading the Group's Risk Function, which is independent from the Group's operational and commercial functions. The Risk Function is responsible for ensuring that appropriate risk management processes and controls are in place, and that they are sufficiently robust, to ensure that key risks are identified, assessed, monitored and mitigated. The Chief Risk Officer is responsible for reporting to the Board that the Group's principal risks are appropriately managed and that it is operating within its risk appetite.

Further information on Risk management objectives, policies, and strategies to manage those risks can be found on the Risk Management page of the Group website: http://www.securetrustbank.com/investors/corporate-information/risk-management.

3.3 Risk Culture

The Group assesses and actively promotes its Operational Risk culture based on the 'Ten Attributes of a Strong Risk Culture' (as broadly defined by the Institute of Risk Management).

The ten attributes of a strong risk culture:

- **Tone** A distinct and consistent tone from the top from the board and senior management in respect of risk taking and avoidance
- **Behaviours** Appropriate risk-taking behaviours are rewarded and encouraged and inappropriate behaviours are challenged and sanctioned

- **Ethics** A commitment to ethical principles, reflected in a concern with the ethical profile of individuals and the application of ethics and the consideration of wider stakeholder positions in decision making
- Ownership A common acceptance throughout the Group of the importance of continuous management of risk, including clear accountability and ownership of specific risks and risk areas
- **Transparency** Transparent and timely risk information flows up and down the Group, with bad news rapidly communicated, without the fear of blame
- **Challenge** Sufficient diversity of perspectives, values and beliefs to ensure that the status quo is consistently and rigorously challenged
- **Engagement** Alignment of risk culture with employee engagement and people strategy to ensure that people are supportive socially, but also strongly focused on the task in hand
- **Escalation** Encouragement of incident reporting and whistle blowing, actively seeking to learn from mistakes
- Complexity Processes or activities are not too complex or too obscure for the risks to be readily understood
- Skills Risk management skills and knowledge are valued, encouraged and developed, with a
 properly resourced risk management function. Professional qualifications and technical
 training are supported

On an annual basis, all business units and support functions across the Group assess their Operational Risk culture and embedding of the Operational Risk Management Framework. The outputs of this assessment are discussed at the Risk Committee (a committee of the Board) and where required actions are taken for further improvement.

3.4 Risk Management Framework

An Enterprise-wide Risk Management Framework ('ERMF') governs the way in which the Group identifies and manages its risks across all principal risk categories.

The purpose of the ERMF is to:

- a) Identify a clear risk taxonomy for the Group.
- b) Provide a consistent and overarching framework across all risk disciplines.
- c) Set out clear standards of risk management to protect the Group, our clients/customers and markets.
- d) Set out the rules and guidance on the establishment and maintenance of systems and controls for the effective management of the risk categories to which the Group is exposed.
- e) Manage risk within acceptable levels and defined risk appetite statements, metrics, and thresholds.
- f) Develops a transparent risk culture that seeks to understand the Group's risk profile and to respond with proportionate and expeditious action to thematic areas of concern.

3.4.1 Risk Appetite

The Group's Board Risk Committee approves the firm's risk appetite statement that confirms the risk parameters within which the strategic aims and vision of the Group are to be achieved. The Board has identified risk drivers and major risk categories relevant to the business to enable it to produce a comprehensive suite of risk appetite statements and metrics which underpin the strategy of the Group:

Risk	Statement
Credit	The Group is profit and growth oriented whilst seeking to maintain a conservative and controlled risk profile. The Group manages credit risk through a pricing for risk model which drives a potential return on equity aligned with the stated target.
Liquidity and Funding	The Group's liquidity risk appetite is to ensure that adequate liquid resources are held to meet its Overall Liquidity Adequacy Requirement and to meet the minimum Liquidity Coverage Ratio at all times such that there is no significant risk that its liabilities cannot be met as they fall due, whether in business as usual or in a stress. The Group's funding risk appetite is to ensure that the Bank has access to stable funding markets and is not reliant on any single source of funding. The Group places no material reliance on unsecured wholesale funding markets. The Bank's primary source of funding is retail deposits from individuals.
Operational	The Group's appetite for operational risk is to have well defined, scalable and controlled processes, running on robust and resilient systems, effective delivery of change and business continuity management. The Group has a low tolerance for operational losses but understands that losses may occur in the pursuit of its business objectives.
Capital	The Group's risk appetite is to maintain capital levels above minimum regulatory requirements. The Group's capital management policy is focused on optimising shareholder value, in a safe and sustainable manner, ensuring capital resources are sufficient to support planned levels of growth.
Market	The Group's market risk appetite is to ensure that under a severe change in rates the impact on earnings and overall value of the Group remain within agreed thresholds.
Conduct	As a result of the way the Group conducts its business we seek to avoid negative outcomes by consistently treating our customers fairly. The Group is straightforward and fair with its customers and seeks to achieve excellent customer service standards. The Group's aim is to be seen as a sound and professional business in the marketplace. The Group has no appetite for reputational risk arising from the way in which we, or our partners behave.
Regulatory	The Group seeks to remain compliant with all relevant regulatory requirements.
Financial Crime	The Group has no appetite for failing to maintain effective: systems, resources, controls and robust oversight to prevent the Group's products and services being used to facilitate Financial Crime.
Climate Change	The Group seeks to understand and quantify its climate change risk exposure, so the Group working with its customers and clients can minimise the financial risks associated with the transition to a low carbon economy and any impacts from Climate change to our business.

Details on the overall risk profile of the Group, can be found in the Principal Risks & Uncertainties section of the Group's 2021 Annual Report & Accounts, from page 26. Key ratios and figures relating to several the risks noted above can be seen within the Strategic Report in the Group's Annual Report and Accounts.

The Risk Committee reviews and approves the Group's risk appetite on an annual basis or more frequently in the event of changes to the risk environment, with the aim of ensuring that it is consistent with the Group's strategy, business and regulatory environment.

3.4.2 Risk Governance

The Group's risk management frameworks, policies and procedures are regularly reviewed and updated to ensure that they accurately identify the risks that the Group faces in its business activities and are appropriate for the nature, scale and complexity of the Group's business. The Group's risk management frameworks support decision-making across the Group and are designed to ensure that each risk is managed, monitored and overseen through a dedicated risk-specific committee.

Effective risk committees are operating at Board, Group and individual business unit level to ensure there is clear accountability for risk management, a robust framework and risk identification and mitigation strategies are in place across the Group.

In 2021 a new Executive Risk Committee ('ERC'), chaired by the Chief Risk Officer was established to further embed and align the Group's risk management frameworks. The Committee reviews key risk management information from across the risk disciplines, with material escalated to the Executive Committee ('ExCo') and/or the Risk Committee (a committee of the Board) as required.

The Group operates a 'Three Lines of Defence' model for the management of its risks.

The Three Lines of Defence, when taken together, control and manage risks in line with the Group's risk appetite. The three lines are:

- First Line: business line managers who own and manage risk;
- Second Line: functions that oversee or specialise in risk management or compliance (Information Security, Operational Risk, Prudential Risk, Credit Risk, Financial Crime and Compliance Teams); and
- Third Line: Internal Audit.

Each line of defence provides a level of assurance on Risk Management within the Group. The Group ensures that each line understands its respective responsibilities and those of the other lines and has the appropriate resource and expertise to fulfil its responsibilities.

The Group's governance structure in respect of risk is summarised in the table over the page, which sets out for each principal risk, the relevant governing policy, the method of reporting and the responsible committee(s).

Risk		Liquidity and Funding	Capital	- Market	Operational	Conduct	Regulatory	Financial Crime	Climate Change

	Risk Committee ³	Risk Committee	Risk Committee	Risk Committee	Risk Committee	Risk Committee	Risk Committee	Risk Committee	Risk Committee

^{1.} Assets and Liabilities Committee ('ALCO')

The monitoring and control of risk is a fundamental part of the Group's management processes. The responsibilities of the Board, Risk Committee and Audit Committee in this respect are described in the Corporate Governance Report within the Group's 2021 Annual Report and Accounts, from page 56.

3.5 Stress Testing

The Group performs stress testing as a key tool to understand and manage the impact of risks crystallising. As well as providing an understanding of resistance to internal and external shocks, stress testing forms a key component of the Group's capital and liquidity assessments.

The Board has set a requirement that the Group is able to withstand a severe but plausible stress scenario without breaching minimum capital requirements.

The stress testing performed is designed to:

- Provide sufficiently severe and forward-looking scenarios
- Confirm that the Group has sufficient capital and liquidity resources
- Ensure that the Group remains within its risk appetite
- Ensure alignment between the risk management framework and decision making.

3.5.1 ICAAP

The ICAAP is the Group's evaluation of its capital position and requirements, assessed under the CRR and Capital Requirements Directive ('CRD V') framework. The ICAAP provides details of the current approaches used to manage risk across the Group. As part of that assessment, the ICAAP assesses capital requirements both against the Group's current position and during severe but plausible stresses over the planning horizon.

^{2.}Executive Committee ('ExCo')

^{3.} Risk Committee is a committee of the Board

Pillar 3 disclosures for the year ended 31 December 2021

The Group assesses its capital requirements against stressed scenarios that consider those specified by the regulator.

3.5.2 ILAAP

The ILAAP is the Group's documentation of its liquidity position and funding requirements, assessed against regulatory requirements and the Group's internal risk tolerance and assessment. An integral component of the approach to liquidity risk management is stress testing, some of which is prescriptive using the rules and guidance issued within prudential regulations and reported within regulatory returns.

3.5.3 Reverse stress testing

Reverse stress testing is integrated into existing stress testing within the ICAAP and ILAAP processes and goes beyond standard tests by considering any extreme event that has the capacity to 'break' the Group. As such it helps to identify risks and possible controls which might ordinarily be missed when using standardised risk assessments.

A key outcome from the process is to consider whether any of the scenarios are sufficiently plausible to necessitate a change to the Group's strategy or underlying controls.

3.5.4 Recovery Plan

The Recovery Plan aims to improve the financial resilience of the Group by describing and evaluating the recovery options available to recover from a significant financial event. The PRA expects the Recovery Plan to be consistent with the ICAAP and ILAAP. The stress scenarios employed to test the Recovery Plan are aligned with the stress testing utilised in the ICAAP and ILAAP processes.

3.6 Board assessment of risk management arrangements

The Risk Committee (a committee of the Board) has reviewed and confirmed that the Group is operating under an effective and adequate risk management framework and system of internal controls covering all relevant categories of risk (Credit, Liquidity and Funding, Operational, Capital, Market, Conduct and Regulatory). This declaration was recommended to and approved by the Board.

4. Composition of Capital

4.1 Composition of regulatory capital

The table below summarises the composition of the Group's regulatory capital as at 31 December 2021. This is presented in accordance with Annex IV of the Commission Implementing Regulation (EU 1423/2013):

		Including	Including
		IFRS 9 Transitional	IFRS 9 Transitional
		Arrangement	Arrangement ²
		31 Dec 2021	31 Dec 2020
		£million	£million
Con	nmon Equity Tier 1 capital: instruments and reserves		
1	Capital instruments and the related share premium accounts	89.7	89.7
	Of which: ordinary shares	7.5	7.5
	Of which: share premium	82.2	82.2
2	Retained earnings	211.7	177.0
3	Accumulated other comprehensive income (and other reserves)	1.0	0.9
5A	Independently reviewed interim profits net of any foreseeable charge or		
	dividend ¹	(7.7)	(8.2)
6	Common Equity Tier 1 capital before regulatory adjustments	294.7	259.4
Con	nmon Equity Tier 1 capital: regulatory adjustments		
8	Intangible assets (net of tax related liability)	(5.3)	(5.5)
11	Fair value reserves related to gains or losses on cash flow hedges	0.3	-
	Other regulatory adjustments (IFRS 9)	13.9	26.9
28	Total regulatory adjustments to Common Equity Tier 1	8.9	21.4
29	Common Equity Tier 1 capital (CET1)	303.6	280.8
45	Tier 1 capital (T1=CET 1+AT1)	303.6	280.8
Tier	2 capital: instruments and provisions		
46	Capital instruments and the related share premium accounts	47.0	45.1
51	Tier 2 (T2) capital before regulatory adjustments	47.0	45.1
58	Tier 2 (T2) capital	47.0	45.1
59	Total capital (TC = T1 + T2)	350.6	325.9
60	Total risk weighted assets	2,087.4	1,999.7
Cap	ital ratios and buffers		
61	Common Equity Tier 1 (as a percentage of total risk exposure amount)	14.5%	14.0%
62	Tier 1 (as a percentage of total risk exposure amount)	14.5%	14.0%
63	Total capital (as a percentage of total risk exposure amount)	16.8%	16.3%
64	Institution specific buffer requirement	3.0%	3.1%
65	Of which: capital conservation buffer requirement	2.5%	2.5%
66	Of which: countercyclical buffer requirement	-	-
	Of which: PRA buffer requirement	0.5%	0.6%
68	Common Equity Tier 1 available to meet buffers (as a percentage of risk		
	exposure amount)	7.8%	7.3%
1 Eoro	seeable dividend of £7.7 million		

^{1.}Foreseeable dividend of £7.7 million.

^{2.} Prior year figures disclosed have been restated. See Note 1.3 of the Annual Report and Accounts for further information.

The Group's regulatory capital comprises of:

- CET 1 capital which comprises shareholders' funds, after adding back the IFRS 9 transition adjustment and deducting certain eligible intangible assets, both of which are net of attributable deferred tax
- Tier 2 capital, which is solely subordinated debt net of unamortised issue costs, capped at 25% of the capital requirement.

For further information on the capital instruments currently issued by the Group, please refer to the EBA Capital instruments key features disclosure template in Appendix C.

The Group's Total Loss Absorbing Capacity ('TLAC') on 31 December 2021 is equal to its total capital requirement (Pillar 1+2A capital), as described in section 4.6. The Group is not required by the PRA to hold a Minimum Requirement for own funds and Eligible Liabilities ('MREL') recapitalisation reserve.

4.2 Reconciliation of statutory equity to regulatory capital resources

The table below reconciles the Group's statutory equity shown within the ARA to the total regulatory capital balance.

	31 Dec 2021	31 Dec 2020 ¹
	£million	£million
Equity per statement of financial position	302.4	267.6
IFRS 9 transitional adjustment	13.9	26.9
Regulatory adjustments		
Less: Intangible assets	(5.3)	(5.5)
Add: Cash flow hedge reserve	0.3	-
Add: Foreseeable dividend	(7.7)	(8.2)
Add: Subordinated liabilities	47.0	45.1
Total regulatory capital resources	350.6	325.9

^{1.} Prior year figures disclosed have been restated. See Note 1.3 of the Annual Report and Accounts for further information.

4.3 Management of capital

To protect the capital adequacy of the Group, internal capital is held to provide a cushion for unexpected losses. In assessing the adequacy of its capital, the Group considers its risk appetite, the material risks to which the Group is exposed and the appropriate management strategies for each of the Group's material risks, including whether capital provides an appropriate mitigant.

The Group's capital management policy is focused on optimising shareholder value over the long-term. Processes exist to ensure that capital is allocated to achieve targeted risk adjusted returns whilst ensuring appropriate surpluses are held above the minimum regulatory requirements. The Board reviews the capital position at every Board meeting.

The ICAAP is a key element of the Group's implementation of the EU Capital Requirements Directive ('CRD'). The process brings together the risk management framework of the Group and the financial discipline of budgeting and business planning.

The ICAAP is reviewed and updated annually. When performing the annual update, the Board will review the continued appropriateness of the stated risk appetite and compare it against actual performance. It will also review the performance of stress testing, to assess the Group's capital adequacy in a range of scenarios.

4.4 Capital Requirements

The Pillar 1 capital requirement calculations set a capital resources requirement of 8% of Risk Weighted Assets ('RWA'). Total Risk Exposure ('TRE') is calculated as the sum of the risk-weighted exposure amounts for credit, counterparty, operational and Credit Valuation Adjustment ('CVA') risks. Where it is considered that this level is insufficient to reflect the actual level of risk, an additional Pillar 2A capital add-on is required. The Total Capital Requirement ('TCR') set by the PRA represents the combined Pillar 1 and 2A capital requirements. The ICAAP is a key input into the PRA's TCR setting process, as it includes an internal assessment of the Group's Pillar 2A capital requirements. The PRA's approach is to monitor the available capital resources in relation to the TCR.

The Group monitors capital ratios monthly to ensure that external and internal requirements are adhered to. The internal requirements (Early Warning Indicators) build in an additional safety margin over the regulatory requirements.

To promote the conservation of capital and the build-up of adequate buffers that can be drawn upon in periods of stress. CRD V requires the holding of supplementary Pillar 2B capital buffers, which are calculated as a percentage of RWA. These are met solely with CET 1 capital and comprise:

- A Capital Conservation Buffer ('CCoB') set at 2.5% of TRE
- A Countercyclical Capital Buffer ('CCyB'), currently set at 0% of TRE
- A PRA buffer ('PRAB'), set for firms on an individual basis.

The FPC announced during December 2021 that the UK Countercyclical Capital Buffer (CCyB) rate will be increased to 1% from 13 December 2022, having been reduced to 0% in March 2020 because of the COVID-19 pandemic. There is no impact on the current year disclosures.

4.5 Pillar 1 Capital Requirements

The Group's minimum capital requirement under Pillar 1 is the sum of the credit risk, operational risk and counterparty credit risk (including the CVA) capital requirements.

The following table shows the credit, operational and counterparty credit risk exposure and risk weighted assets for each of the Group's exposure classes after CRM and the associated Pillar 1 minimum capital requirements (being 8% of risk weighted assets).

	Risk Weighte	ed Assets	Minimum Capita	l Requirement
	31 Dec 2021 £million	31 Dec 2020 ² £million	31 Dec 2021 £million	31 Dec 2020 ² £million
Central governments or central banks ¹	9.4	16.8	0.8	1.3
S	_			_
Institutions	12.4	16.0	1.0	1.3

Secured on Immovable Property	401.9	403.5	32.2	32.3
Exposures in default ¹	130.1	131.9	10.4	10.6
Other ¹	29.6	40.1	2.4	3.2
Items associated with a particular high risk ¹	214.8	276.9	17.2	22.2
Credit Risk (Standardised Approach)	1,826.6	1,756.3	146.1	140.6
Counterparty credit risk				
(Mark to Market Approach)	2.3	2.6	0.2	0.2
Operational risk (Standardised Approach)	258.5	240.8	20.7	19.3
Total	2,087.4	1,999.7	167.0	160.1

^{1.}A number of comparatives have also been restated to reflect a change in presentation for certain risk weighted asset classes. This has no impact on total risk weighted assets.

^{2.} Prior year figures disclosed have been restated. See Note 1.3 of the Annual Report and Accounts for further information.

The credit risk capital requirement has increased by 3.9% in the period. This is primarily attributable to growth in the lending book, which increased by 7.3% during the period.

Total assets increased from £2,661.2 million to £2,885.9 million over the same period.

4.5.1 Counterparty Credit Risk

The counterparty credit risk exposure has arisen during the year as the Group has utilised derivatives to manage interest rate risk.

Further information on counterparty credit risk can be found in Section 6.13.

Counterparty credit risk is initially measured using the mark-to-market method and subsequently risk weighted under the standardised approach. The Group also calculates a CVA charge due to the risk of adverse moves in the credit valuation adjustments associated with expected credit losses on derivative transactions.

The capital required under this approach was £0.2 million on 31 December 2021 (2020: £0.2 million).

4.5.2 Operational Risk

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems or from external factors. These can relate to breaches of law and regulations, error or omission, unauthorised activities and fraud, system failure or external events.

A description of the Group's approach to Operational Risk can be found within the Principal risks and uncertainties section on page 32 of the Group's 2021 Annual Report and Accounts.

CRD V requires that the Group holds Pillar 1 capital against operational risk. The amount of capital the Group is required to hold is determined by the Standardised Approach ('TSA'), where risk weighted assets are calculated is based on the average of the Group's income over the past three years.

The capital required under this approach was £20.7 million on 31 December 2021 (2020: £19.3 million), the increase being attributable to the historic growth of the business.

4.6 Total Capital Requirement

The PRA's capital guidance currently applicable to the Group is to hold a TCR of 9.00% of the Group's risk weighted assets. This equates to £187.9 million at 31 December 2021.

This sets the minimum total capital that the Group must hold under Pillar 1 and Pillar 2A requirements and is driven both by balance sheet growth and risk factors determined by the PRA. The Group comfortably meets this requirement with CET 1 capital alone. CET 1 capital used to meet the TCR may not be used to meet the supplementary Pillar 2B buffers: the CCoB, CCyB and PRAB.

5. Leverage Ratio

CRD V currently sets a supervisory expectation of a minimum ratio of 3.00%. The Group has maintained its leverage ratio well above the minimum requirement throughout the year.

The PRA has implemented the FPC direction to introduce a UK Leverage Ratio Framework, as set out in PS21/21. This increases this minimum expectation to 3.25% from 1 January 2022 for firms not subject to the UK Leverage Ratio Framework. Whilst the Group remains outside the scope of the Leverage Ratio Framework, it adheres to the supervisory expectations in a similar manner to those falling within the scope.

Summary details of the Group's leverage ratio are included within section 2 above. The leverage ratio disclosures required by Annex I of EU 2016/200 are included in Appendix B.

6. Credit Risk

Credit risk is the risk that customers or other counterparties are unable to meet their financial obligations to the Group as they fall due.

For the purposes of the Group, this normally means the risk that borrowers will be unable to repay their loan obligations, market counterparties will be unable to meet their margin payment commitments as they fall due or that a financial institution will not repay funds invested by the Group in that institution.

All Group lending took place within the United Kingdom.

General qualitative information about credit risk

6.1 How the business model translates into the components of the Group's credit risk profile

The Board has assessed the principal credit risks inherent within the business. These are documented in the Principal Risks and Uncertainties section on page 28 of the Group's 2021 Annual Report and Accounts.

6.2 Criteria and approach used for defining credit risk management policy and for setting credit risk limits

The Group's strategy is to have a balanced lending portfolio that constitutes a mix of Consumer Finance and Business Finance. The composition of the business mix is agreed by the Board through appropriate concentration risk limits. The policies detail the core product lending parameters including maximum lending limits in terms of product exposure limits, aggregate exposures to customers and concentration risk to any one particular introducer.

6.3 Structure and organisation of the credit risk management and control function

The Group operates a three lines of defence model to manage credit risk:

Underwriting and Quality Assurance - First Line of Defence: Consumer Finance Lending

The Underwriting and Operational Quality Assurance teams are the first line of defence for Vehicle Finance, headed up by the Group's Motor Operations and Service Solutions Director, with the V12 Operations Director having first line responsibility for the Retail Finance business.

Credit Committee Process - First Line of Defence: Business Finance Lending

In the Business Finance businesses, the client relationship management teams are the first line of defence. These teams are responsible for ensuring that new business origination meets the Group's credit policies and risk appetites, as well as in-life monitoring of all loans. These teams report into the line management of each business line and a portfolio reporting process is in place to highlight key risks to the Group's senior management and risk committees.

Credit Risk - Second Line of Defence

The Credit Risk function is the second line of defence. Credit Risk is headed up by the Group Head of Consumer Credit Risk and the Heads of Credit Risk for Real Estate Finance and Commercial Finance. Reporting to the Chief Risk Officer, the Heads of Credit Risk are responsible for ensuring that the business adheres to the Board credit risk appetite, strategy and credit risk mitigation for all the Group's lending products from new acquisition to write-off, through portfolio analysis.

A reporting process exists to highlight key risks to the Group's Senior Management and Risk Committees.

Internal Audit - Third Line of Defence

Internal Audit forms the Group's third line of defence. The Internal Audit function is independent of management and is managed by the Chief Internal Auditor who reports to the Audit Committee Chairman and has right of attendance at the Group Executive Committee meeting.

Relationships between the credit risk management, risk control, compliance and internal audit functions

All Group processes, business units and support functions are in scope for Internal Audit review. The internal audit plan, which is risk-based, covers all significant business processes and enabling functions over a four-year period and the plan is updated each year and approved by the Board Audit Committee. Credit risk features in the Internal Audit plan every year, in both business process reviews (reviewing credit risk management as operated by the underwriting teams and supported by quality assurance at application stage and in-life) and in audits of the effectiveness of the second line of defence functions. Although not every business unit or second line function is covered every year, all are covered over a four-year period and the processes or functions that are regarded as highest risk are subject to review more frequently.

6.4 Credit risk management

A Portfolio Review pack is prepared on a monthly basis to monitor trends in both the consumer and business finance portfolios, covering applicant quality and portfolio performance including staging and expected credit losses metrics under IFRS 9.

In the Consumer Finance books in particular, metrics are generated to review the effectiveness of the acquisition scorecards and designed to identify any deterioration of the predictive power of the scorecard.

Data is scrutinised at application level but furthermore by introducers. Introducer statistics include application volumes and quality, written rates/quality and post acceptance the performance of the written loans.

6.5 Total and average net amount of exposures

Credit risk exposures by exposure class are shown in the table below, together with the associated average credit risk exposure (calculated using the previous four quarters exposure per the EBA's

Secure Trust Bank PLC

Pillar 3 disclosures for the year ended 31 December 2021

Common Reporting returns). The table also includes risk-weighted assets and minimum capital requirements under Pillar 1 for each of the respective exposure classes.

The exposure amounts disclosed are pre-application of CRM and pre-application of CCF.

At 31 December 2021	Credit risk exposure – before CCF and CRM £million	Average credit risk exposure £million

^{1.} Prior year figures disclosed have been restated. See Note 1.3 of the Annual Report and Accounts for further information.

6.8 Credit risk adjustments

The Group follows the regulatory definition for past due and impaired exposures for accounting purposes. All exposures greater than 90 days overdue are considered as impaired.

Impairments are calculated based on criteria including the number of months overdue and the likelihood of recovery.

Note the Group's debt management business purchases credit-impaired loans from unrelated third parties. Under IFRS 9 these are classified as Purchased and Originated Credit-Impaired ('POCI') loans. The Group also purchases credit-impaired loans from Group undertakings.

The Group's impairment provisions are calculated in line with the requirements of IFRS 9. IFRS 9 requires that impairment is evaluated on an expected credit loss ('ECL') basis. ECLs are based on an assessment of the probability of default ('PD') and loss given default ('LGD'), discounted to give a net present value. The estimation of ECL should be unbiased and probability weighted, considering all reasonable and supportable information, including forward-looking economic assumptions and a range of possible outcomes. Provision may be based on either twelve month or lifetime ECL, dependent on whether an account has experienced a significant increase in credit risk.

Further details of the following can be found in the Group's 2021 Annual Report and Accounts

- the Group IFRS 9 impairment policy in Note 17;
- details of impairment allowances (credit risk adjustments) by business in Note 17;
- details of the loans and advances impairment allowances at the reporting date and a reconciliation of the opening and closing allowances, including the charge to the income statement in Note 17;
- details of impaired exposures (stage 3) and past due exposures by business in Note 38; and
- information on the Group's forbearance approach in note 38.2.

6.9 Ageing analysis of past due exposures by industry sector

The tables below exclude impaired accounts which are up to date. The majority of stage 3 household debt over 90 days balance represents debt managed by the Group's DMS subsidiary, a credit management entity.

			isk since			isk since	Carryi	U	g amount of credit impaired assets (Stage 3) £ million

21

6.10 Credit risk mitigation (CRM)

CRM is a methodology used by an institution to reduce the credit risk associated with an exposure.

- a. CRM for the unsecured retail business is principally facilitated through use of bespoke scorecards. This is considered a robust approach as overrides are only allowed by exception and the proportion and absolute value of such exceptions are capped.
- b. The Vehicle Finance portfolio is secured by a charge on the underlying client assets funded.
- c. All commercial business lending is provided on a secured basis at prudent loan-to-value ratios and therefore is considered adequately mitigated. The form of collateral is dependent upon the business.
 - Real Estate Finance: all loans are secured against property at prudent loan-to-values ('LTV'; investment assets) or loan-to-gross development values ('LTGDV'; development assets), based on a formal 'red book' valuation provided by a Member of the Royal Institution of Chartered Surveyors ('MRICS'). The Group also maintains a specific collateral valuation policy for real estate assets which sets out the Group's expectations for all real estate valuations. Credit policy permits the Real Estate Finance business to lend to a maximum loan-to-value of 70% for investment loans and 60% for residential development loans and up to 65% for pre-let commercial development loans (based on gross development value).
 - Commercial Finance: loans are primarily secured by a charge over the full debtor book
 of clients, with additional security provided by debentures over all unencumbered
 assets and in some cases supported by personal guarantees from beneficial owners.
 The Group maintains a specific collateral valuation policy for non-real estate assets
 which sets out the Group's approach to valuing common asset classes such as
 inventory or plant and machinery.
 - Stock Funding: loans are secured by ownership of the underlying vehicles.

Chapter 4 Title III of the CRR specifies specific forms of funded and unfunded CRM which can be used in the calculation and reporting of credit risk (under the standardised approach) to reduce a firm's credit risk capital requirement. This CRM is in the form of cash collateral and guarantees held by the Group.

The funded and unfunded CRM techniques utilised by Group are as follows:

- A legal agreement is in place for the for the STB Leasing book (£1.3 million) whereby the Group's counterparty assumes responsibility for all credit risk under the agreement.
- Cash collateral is provided by a number of our counterparties, where the collateral held is sufficient to cover the full exposure.
- The Government provides unfunded credit protection in the form of a guarantee on Commercial Finance lending advanced under the following schemes; Coronavirus Business Interruption Scheme ('CBILS'), Coronavirus Large Business Interruption Loan Scheme ('CLBILS'), Recovery Loan Schemes 2021 (RLS 2021) and Recovery Loan Schemes 2022 (RLS 2022). The percentage of lending guaranteed varies by scheme, at either 70% or 80% of the outstanding balance after taking account of any personal guarantees or other collateral held. Total lending under these schemes at year end was £42.9 million.
- The Group does not make significant use of any netting agreements to reduce original exposures, the only form of netting currently applied relates to derivative contracts. Refer to the Counterparty Credit Risk section 6.13 for further detail on derivative netting.

6.12 Use of external credit ratings

The credit risk of treasury counterparties is controlled through the Group's Treasury Policy which limits the maximum exposure and term by entity where the Group can deposit or invest.

The Group makes limited use of credit assessments by External Credit Assessment Institutions ('ECAI') in assigning risk weights to credit risk exposures under the standardised approach. This typically applies in the case of certain Central Government, Central Bank and Institution exposures. The appropriate risk weight to apply to the credit risk exposure is determined by assigning the exposure to the relevant credit quality step based on the EBA's mapping of credit assessments to credit quality steps.

The Group uses credit ratings published by Moody's, who are recognised as an ECAI. Details of the credit ratings of the institutions with which the Group places funds are provided in Note 13 of the Group's 2021 Annual Report and Accounts.

6.13 Counterparty credit risk - derivatives

Counterparty credit risk is the risk that a counterparty to a derivative instrument to which the Group has an exposure could default. This risk is mitigated by cash collateral deposited with or received from counterparties on a daily basis in line with the European Market Infrastructure Regulation ('EMIR') to mitigate the mark-to-market exposures on derivatives.

^{2.}A number of comparatives have also been restated to reflect a change in presentation for certain risk weighted asset classes. This has no impact on total risk weighted assets.

The Group uses derivatives to reduce exposure to interest rate risk and are not used for trading or speculative purposes. Derivative activity is documented in standard International Swaps and Derivatives Association ('ISDA') Master Agreements. In all cases a Credit Support Annex ('CSA') is executed in conjunction with the ISDA Master Agreement to mitigate credit risk on the derivatives portfolio.

The posting of collateral reduces the impact of the current market value to the difference between the market value of the derivatives and the value of the collateral. The use of 'thresholds' and 'minimum transfer amounts' avoids the movement of small amounts of collateral.

If the counterparty fails to post any additional collateral required, a default can be enforced within a very short timeframe resulting in a substantial reduction in the potential future increases in credit exposure. This rapid default enforcement shortens the timescale within which future changes in interest rates would affect the value of the exposure.

Derivative positions and collateral are valued daily and compared with counterparty valuations to agree collateral settlement. Cash is the only collateral allowed. Any disputes in value are monitored and escalated by the dispute resolution procedures.

Liquidity is held for additional collateral that would have to be posted in the event of adverse movements in market rates.

The counterparty credit risk for derivative contracts is calculated under the mark-to-market method, and is presented in the following table:

	31 Dec 2021	31 Dec 2020
	£million	£million
Gross positive fair value of derivative contracts	3.8	4.8
Potential future exposure	4.0	4.1
	7.8	8.9
Netting benefit	(2.0)	(1.7)
Net derivative credit exposure	5.8	7.2

The Group is not currently exposed to 'wrong way' risk (defined as the risk that occurs when exposure to a counterparty is adversely correlated with the credit quality of that counterparty, occurring when default risk and credit exposure increase together). Secure Trust Bank PLC has no public credit rating.

7. Securitisation

The Group has not originated any securitisation transactions and has no investment exposure to securitisation instruments or securities as of 31 December 2021.

8. Market Risk

Market risk is the risk of unexpected market movements leading to unforeseen variance in the Group's earnings or overall value as an entity. The Group's primary market risk exposure is to changes in interest rates. The Group is also exposed to a small amount of Foreign Exchange risk through the existence of non-GBP cash and lending balances within the Commercial Finance business.

Market risk is managed by the Group's Treasury function and is overseen by the ALCO. The Group does not take significant unhedged positions and does not operate a trading book.

The Group's risk management framework, policies and procedures are regularly reviewed and updated at least annually to ensure that they accurately identify the risks that the Group faces in its business activities and are appropriate for the nature, scale and complexity of the Group's business.

8.1 Interest Rate Risk

Interest rate risk arises from the timing mismatch between the Group's assets and liabilities. In the first instance the Group aims to offset the interest rate risk arising from new lending through the raising of term deposits. The Group uses an interest rate sensitivity gap to monitor its exposures and highlight any residual mismatched interest rate risk positions, which in turn are externalised through the execution of interest rate derivatives.

The Group's exposure to interest rate risk is assessed using a set of modelling assumptions, including but not limited to:

- The early repayment of customer assets and the early withdrawal of customer liabilities.
- The investment term for the Group's own equity as set by Board and maintained by Treasury through structural hedging.
- ALCO also monitors and sets limits against the Group's exposure to several different interest rate scenarios.

The Group reports its Market Value Sensitivity and Earnings at Risk monthly to ALCO, ExCo and Board committees. These are mainly assessed against 200 basis point ('bp') and 100bp parallel shifts in rates respectively.

The Group monitors its exposure to the Economic Value of Equity ('EVE') as a proportion of own funds and Tier 1 capital against a 200bp parallel shift in rates, as well as the six standardised shocks prescribed by the Basel Committee on Banking Supervision. The Group also measures its exposure to basis risk and optionality.

All such exposures are maintained within the risk appetite set by the Board and are monitored by ALCO.

Detail on the Group's economic value and earnings exposures on 31 December 2021 can be found in the Market Risk Section in Note 39 of the Group's 2021 Annual Report and Accounts.

8.2 Hedging

The Group transacts interest rate and foreign exchange swaps for risk mitigation purposes, the Group does not operate a trading book. Interest rate swaps are designated into fair value and cash flow hedge accounting relationships. The effectiveness of the relationships is measured monthly with any ineffectiveness taken through profit and loss.

Interest rate swaps requirements are reviewed monthly, as well as when large exposures arise. The exposure from the portfolio frequently changes due to the origination of new instruments, contractual repayments and early prepayments made in each period. As a result, the Group adopts a dynamic hedging strategy (sometimes referred to as 'macro' or 'portfolio' hedge) to hedge its exposure profile by closing and entering into new swap agreements. Hedge-related management information is submitted to ALCO monthly.

Further detail on the Group's hedging policy can be found within the Group's 2021 Annual Report and Accounts, specifically Note 7 Losses on derivatives and hedge accounting.

9. Asset Encumbrance

An asset shall be treated as encumbered if it has been pledged or if it is subject to any form of arrangement to secure, collateralise or credit enhance any transaction from which it cannot be freely withdrawn.

The Group's primary source of encumbered assets are those that have been pledged with the Bank of England to secure funding under the Sterling Monetary Framework and more specifically the Term Funding Scheme with additional incentives for Small and Medium-sized Enterprises ('TFSME') and Indexed Long-Term Repo ('ILTR') schemes. Assets that the Group can pledge with the Bank of England include loan assets and debt securities. Assets are encumbered with the contractual requirements of these transactions. All encumbered assets reside on the balance sheet of the holding company.

The other source of encumbrance for the Group is through derivative transactions with market counterparties. As the market value of the derivatives fluctuate with changes in market rates additional cash ('margin') is passed between the Group and the derivative counterparty. Cash margin held with the counterparty in this respect is treated as encumbered.

Due to the permanent nature of the BoE Cash Ratio Deposit requirement, this is also considered to be an encumbered asset.

Unencumbered assets include cash, unpledged loan assets, property, plant and other fixed assets, intangible assets including goodwill and deferred tax assets.

As illustrated below, on 31 December 2021 the ratio of encumbered assets was 20.2% (2020: 15.7%) and was largely comprised of Retail Finance loans. £579.9 million of Retail Finance loans were encumbered to support £390.0 million of TFSME borrowings.

9.1 Amount of encumbered and unencumbered assets

The table below sets out the assets of the Group, (the median of the sums of the four quarter end values over the previous 12 months as prescribed by the EBA), analysed between those pledged as security or otherwise encumbered and unencumbered assets, both at their carrying amounts and fair values (where reported), split by category of asset, and in some cases, further analysed:

At 31 December 2021:

		Carrying amount of encumbered assets £million	of which notionally eligible EHQLA and HQLA £million	Fair value of encum- bered assets £million	of which notionally eligible EHQLA and HQLA £million	Carrying amount of unencumbered assets £million	of which notionall y eligible EHQLA and HQLA £million	Fair value of unencu- mbered assets £million	of which notionally eligible EHQLA and HQLA £million

10. Liquidity and Funding Risk

Liquidity and Funding Risk is the risk that the Group is unable to meet its obligations as they fall due or can only do so at excessive cost. The Group maintains adequate liquidity resources and a prudent stable funding profile at all times to cover liabilities as they fall due in normal and stressed conditions. The Group manages liquidity in line with internal and regulatory requirements, and at least annually assesses the robustness of the liquidity requirements as part of the Group's ILAAP.

A description of the Group's approach to Liquidity and Funding Risk can be found within the Principal risks and uncertainties section on page 29 of the Group's 2021 Annual Report and Accounts.

11. Remuneration

The PRA has defined certain requirements relating to remuneration. Under the requirements of the PRA Supervisory Statement SS2/17 Remuneration the Group is classed as a level 3 firm; this means that the Group is not required to satisfy in full all elements of the Remuneration Code. Notwithstanding this, in formulating and applying the Remuneration Policy the Committee has had regard to the remuneration codes.

All firms subject to the Code must make sure their remuneration policies and practices are consistent with and promote sound and effective risk management.

Some of the features of the Code apply to a firm as a whole, while other requirements, such as those on the structure of awards, apply mainly to Directors and Material Risk Takers, also referred to as Remuneration Code staff or Identified Staff. Examples of such individuals include:

- Senior Management
- Risk takers and staff in control functions
- Those earning in the same remuneration bracket as the above, whose professional activities have a material impact on the firm's risk profile

11.1 Role of the Remuneration Committee

The Remuneration Committee assists the Board in fulfilling its responsibilities in relation to remuneration including, amongst other matters, determining the policy for individual remuneration and benefits packages of the Executive Directors and the senior management immediately below Board level. The Committee reviews workforce remuneration, related policies and how executive and wider workforce pay are aligned and with regard to the culture of the Group.

The Remuneration Committee is composed of four members, Baroness Lucy Neville-Rolfe being the newest member appointed in March 2021. Victoria Stewart remains Chairman of the Committee after her appointment on 21 July 2017.

The Remuneration Committee meets at least twice a year and ordinarily four times a year and additionally when required to address non-routine matters. The Company Secretary, or their alternate, acts as Secretary to the Remuneration Committee. Other individuals attend at the request of the Remuneration Committee Chairman and during the year the Chief Executive Officer, Human Resources Director and other senior managers attended meetings to report to the Committee.

The Chairman of the Remuneration Committee reports to the Board on the outcome of Committee meetings and any recommendations arising from the Committee.

11.2 Key features of the Remuneration Policy

Remuneration policy is overseen by the Remuneration Committee. The key principles behind the Group's Remuneration Policy are:

- to be simple and transparent in order to reflect the Group's mission statement of straightforward, transparent banking;
- to promote the long-term success of the Group, with transparent and demanding performance conditions;
- to provide alignment between executive reward and the Group's values, risk appetite and shareholder returns; and
- to have a competitive mix of base salary and short and long-term incentives, with an appropriate proportion of the package linked to the delivery of sustainable long term growth.

The application of the Remuneration Policy, details of external consultants used and information on the link between pay and performance can be seen in the Remuneration Report starting on page 76 of the Group's 2021 Annual Report and Accounts.

In determining appropriate rewards for executive management, the Remuneration Committee has had regard to the year's achievements, the balanced business scorecard agreed by the Committee and the parameters of the Remuneration Policy. The Remuneration Committee, in determining appropriate awards for Executive Directors, also has had regard to the risk culture of the Group and regulatory matters, as well culture and employee engagement.

11.3 Remuneration awarded during the financial year of code staff by business area

At 31 December 2021:

	Senior managers		Other material risk takers			
	Central	Total	Consumer Finance	Business Finance	Central	Total
Number of employees	8	8	7	8	15	30
	£million	£million	£million	£million	£million	£million
Fixed remuneration	1.8	1.8	1.4	1.6	2.6	5.5
Variable remuneration	0.5	0.5	0.5	0.6	0.6	1.8
Total remuneration	2.3	2.3	1.9	2.2	3.2	7.3

Senior managers represent the executive and non-executive directors of the Group. Other material risk takers have been determined in accordance with the EBA 'Material Risk Takers Regulatory Technical Standards' definition as staff 'whose professional activities have a material impact on the Group's risk profile'.

11.4 Statement of Directors' external directorships

The number of other directorships of Board members as at 31 December 2021, outside the Group, is disclosed in accordance with Article 435 of the CRR below. For the purposes of this disclosure directorships of related entities are counted as a single appointment.

		Number of
Director	Position	external appointments
	Chair of the Board	appointments
The Rt Hon Lord Forsyth		1
Rachel Lawrence	Chief Financial Officer	-
Ann Berresford	Senior Independent Director	1
David McCreadie	Chief Executive Officer	3
Paul Myers	Non-Executive Director	-
Baroness Lucy Neville-Rolfe	Non-Executive Director	4
Victoria Stewart	Non-Executive Director	4
Finlay Williamson	Non-Executive Director	1_

11.5 Recruitment Policy and Diversity

Further information on the recruitment policy for the selection of members of the management and diversity is included in Nominations Committee Report on pages 62 and 64 respectively, of the Group's 2021 Annual Report and Accounts.

Appendix A: Countercyclical Capital Buffer

Geographical distribution of credit exposures used in the Countercyclical Capital Buffer (CCyB)

The template discloses information relevant for the calculation of the CCyB in accordance with the requirements of Annex I of the Commission Delegated Regulation (EU) 2015/1555 is presented below:

At 31 December 2021:

		General Credit				
		Exposures:	Own Funds Re	equirements		
		Exposure	Exposure		Own funds	Counter-
		value for	value for		require-	cyclical
		SA	SA	Total	ments	capital
		£million	£million	£million	weights	buffer rate
		010	070	100	110	120
010	Breakdown by country: UK	2,590.8	144.4	144.4	1.0	0%
020	Total	2,590.8	144.4	144.4	1.0	0%

At 31 December 2020:

		General Credit Exposures:	Own Funds Re	equirements		
		Exposure value for SA ¹ £million	Exposure value for SA ¹ £million	Total £million	Own funds require- ments weights	Counter- cyclical capital buffer rate
		010	070	100	110	120
010	Breakdown by country: UK	2,431.8	137.9	137.9	1.0	0%
020	Total	2,431.8	137.9	137.9	1.0	0%

^{1.} Prior year figures disclosed have been restated. See Note 1.3 of the Annual Report and Accounts for further information.

The Group's underlying credit exposures are considered within the UK in accordance with the definition of the geographic location of credit exposures set by the Commission Delegated Regulation (EU) 2014/1152.

Therefore, only the CCyB set by the FPC applies. The CCyB rate applicable in the United Kingdom at 31 December 2021 was 0%.

Amount of institution-specific CCyB

		010	010
		31 Dec	31 Dec
		2021	2020
		£million	£million
010	Total risk exposure amount ¹	2,087.4	1,999.7
020	Institution-specific countercyclical buffer rate	0%	0%
030	Institution-specific countercyclical buffer requirement	0	0
4.0:			

^{1.} Prior year figures disclosed have been restated. See Note 1.3 of the Annual Report and Accounts for further information.

Appendix B: Leverage Ratio Disclosures

Presented in accordance with Annex I of the Commission Implementing Regulation (EU) 2016/200.

	obligation assets)	34.3	47.0

^{1.} Prior year figures disclosed have been restated. See Note 1.3 of the Annual Report and Accounts for further information.

Table LRQua – Qualitative information on risk of excessive leverage and factors impacting the Leverage Ratio

1: Description of the processes used to manage the risk of excessive leverage

The risk of excessive leverage is the risk that the business lends excessively in relation to its capital and deposit base, thereby increasing the Group's vulnerability to environmental factors and thereby increasing the risk of failure. The Group has defined processes and controls in place to manage this risk including active tracking of the leverage ratio. This ratio is monitored against defined early warning and trigger points and reported to ALCO on a monthly basis.

2: Description of the factors that had an impact on the Leverage Ratio during the period to which the disclosed Leverage Ratio refers

The Leverage Ratio has remained flat over the year, this has been driven by favourable increases in both lending and capital balances.

^{2.} A number of comparatives have also been restated to reflect a change in presentation for certain risk weighted asset classes. This has no impact on total risk weighted assets.
