RUFFER INVESTMENT COMPANY LIMITED

An alternative to alternative asset management

Investment objective

The principal objective of the Company is to achieve a positive total annual return, after all expenses, of at least twice the Bank of England base rate by investing in internationally listed or quoted equities or equity related securities (including convertibles) or bonds which are issued by corporate issuers, supra-nationals or government organisations.

RIC performance

Investment report

The net asset value of the Company currently stands at 186.46p, a rise of 0.6% during the month. The share price rose 2.6% in March and the premium over NAV was 5.9%.

This compared favourably with the fall in the equity markets, a representative of which was the FTSE All-Share total return, which dropped by 6.2% during the period. We view Ruffer Investment Company as a long only portfolio, but we have the power to take out put options in the fund, although these are rarely more than de minimis. At the end of April we had small positions (out of the money) on the Euro STOXX 50 market, and similar options on the FTSE and S&P, which in total amounted to 1.4% of the value of the fund. These came very right during the month, and we have sold the FTSE and European options, and left half the S&P position. These trades helped the portfolio by just over 2%, and the market value of the remaining option represents about 0.7% of the month-end value of the fund.

For the main portfolio, let us deal first with the successes - brace yourself for a short paragraph! The index-linked positions made a small amount of money in local currency terms - the longer the duration the better they did - and the best part of the portfolio was the TIPs, which were held in dollars, and made nearly 1% of the value of the fund. Gold was a modest beneficiary making a small positive contribution. In the equities things were not too bright. The North American securities showed smaller falls than the indices, with Kraft being the best performer; the strength of the Dollar meant that overall we lost almost no money in this category. In the UK the stand out bloomer was BP, about which I see that we had a good boast in our April letter. The overall effect of this fall (with BP still standing at 494p at the month end)

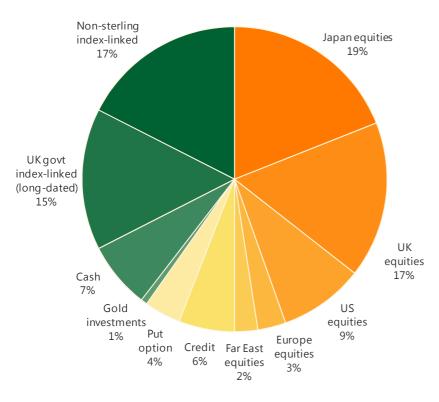

was a loss of 0.4% of the value of the fund which represented almost exactly half the total loss of the UK equity positions. The large position of Vodafone turned out to be reinforced at exactly the wrong moment. The equity positions in Japan let us down. The fact that we had covered the yen back into sterling meant that, instead of escaping with anything barely worse than a break-even, we lost about 1.5% of the value of the fund here. We remain confident that Japan will make us money; the political turmoil of recent days has done more harm to the yen (now irrelevant to us through the currency cover) than the equity market, and we continue to think that the reformists at the Bank of Japan will have their day, and there will be quantitative easing ahead.

Once again, we feel remarkably lucky to have come through a very difficult month, comparatively unscathed. The options certainly helped, and the strong weighting in inflation-plays was a positive for us, despite the fact that the developments in the world have been comprehensively deflationary. We correctly identified that the US dollar would be a beneficiary of a setback in the markets, but we were wrong not to keep open our yen exposure for the same sort of balancing that we had there last year – bad markets meant a strong yen. We declared our hand too early by suffering a bear phase in Tokyo without any currency protection.

We wrote last month that we were concerned about dislocations in the Far East. The mood in China continues to worsen, but there has been no decisive break in the market there. Until that situation becomes clearer (which we think will mean clearly deteriorating), we are reluctant to play strongly the theme of economic recovery which we still believe in. Nevertheless, our eyes are once again westward, and we think that the dollar and assets situate in the United States will be a happier place to be than the Peking zither.
