FINANCIAL MEASURES THAT SUPPLEMENT GAAP

We believe that presenting non-GAAP financial measures provides management and investors useful measures to evaluate performance and trends of the total company and its businesses. This includes adjustments in recent periods to GAAP financial measures to increase period-to-period comparability following actions to strengthen our overall financial position and how we manage our business. In addition, management recognizes that certain non-GAAP terms may be interpreted differently by other companies under different circumstances. The reasons we use these non-GAAP financial measures and the reconciliations to their most directly comparable GAAP financial measures follow. Certain columns or rows within these reconciliations may not add or recalculate due to the use of rounded numbers. Totals are presented are calculated from the underlying numbers in millions.

The service cost for our pension and other benefit plans are included in Adjusted earnings*, which represents the ongoing cost of providing pension benefits to our employees. The components of non-operating benefit costs are mainly driven by capital allocation decisions and market performance. We believe the retained cost in Adjusted earnings* provides management and investors a useful measure to evaluate the performance of the total company and increases period-to-period comparability. We also use Adjusted EPS* as a performance metric at the company level for our annual executive incentive plan.

We believe investors may find it useful to compare free cash flows* performance without the effects of cash flows for separation cash expenditures and Corporate restructuring cash expenditures (associated with the separation-related program announced in October 2022). We believe this measure will better allow management and investors to evaluate the capacity of our operations to generate free cash flows*.
