## 1. DEBT

This section presents data on the Québec government's debt and compares the indebtedness of the Canadian provinces.

Several concepts of debt can be used to measure a government's indebtedness. The following table presents data on the Québec government's debt according to the two main concepts the government employs.

TABLE D.1

### Debt of the Québec government as at March 31

(millions of dollars)

	2009	2010 <sup>P</sup>	2011 <sup>P</sup>	2012 <sup>P</sup>	2013 <sup>P</sup>	2014 <sup>P</sup>	2015 <sup>P</sup>

P: Preliminary results for 2010 and forecasts for subsequent years.

1 Excludes pre-financing.

2 Includes the balance of the stabilization reserve.

3 Includes the restatement of \$3 758 million stemming from a change made in Hydro-Québec's accounting policies in 2010 for the purpose of complying with IFRS. This change reduces the value of the government's participation in Hydro-Québec and increases the debt representing accumulated deficits. Also includes the restatement of \$869 million arising from the implementation of line-by-line recording of the results of institutions in the health and social services and education networks, as required by the new CICA accounting standards established in 2009-2010.

4 After taking the stabilization reserve into account.

## 1.1 Debt representing accumulated deficits

Debt representing accumulated deficits is a simple concept that reflects the financial position of a government well, since it takes all of its liabilities and assets into account. The federal government and the governments of Ontario and Alberta use debt representing accumulated deficits as a measure of indebtedness in their budget documents.

The debt representing accumulated deficits corresponds to the difference between the government's liabilities and its financial and non-financial assets as a whole. The debt representing accumulated deficits is calculated by subtracting financial assets, net of other liabilities, as well as non-financial assets from the gross debt.

Preliminary results show that the debt representing accumulated deficits should amount to \$106 628 million as at March 31, 2010, or 35.4% of gross domestic product (GDP).

The debt representing accumulated deficits as at March 31, 2010 has been adjusted to take into account a change made by Hydro-Québec in its accounting policies in early 2010 for the purpose of complying with International Financial Reporting Standards (IFRS). All entities subject to public accountability and government enterprises will have to apply IFRS as of January 1, 2011. These standards differ significantly from those currently in effect, particularly with regard to the accounting method for capital expenditures. This change in accounting policies reduces Hydro-Québec's retained earnings balance by \$3 758 million. Therefore, the value of the government's participation in Hydro-Québec is reduced by the same amount. This change thus increases the debt representing accumulated deficits by \$3 758 million as at March 31, 2010, but does not affect the government's gross debt.

The debt representing accumulated deficits as at March 31, 2010 has also been restated by \$869 million. This restatement arises from the implementation of line by line recording of the results of institutions in the health and social services and education networks, as required by the new CICA accounting standards established in 2009-2010.

Over the coming years, the debt representing accumulated deficits is expected to increase by \$3.0 billion. This increase is due to the deficits of \$8.6 billion that will be posted from 2010-2011 to 2012-2013 but that will be offset in part by the \$5.6-billion increase in the Generations Fund. Note that the debt representing accumulated deficits will stop rising once the budget is balanced in 2013-2014. It will then decline year after year at the rate of increase of the Generations Fund.

TABLE D.2

**Factors responsible for growth in the debt representing accumulated deficits**  
(millions of dollars)

	<b>Debt, beginning of year</b>	<b>Budgetary deficit</b>	<b>Generations Fund</b>	<b>Restatements</b>	<b>Total change</b>	<b>Debt, end of year</b>	<b>As a % of GDP</b>

P: Preliminary results for 2009-2010 and forecasts for subsequent years.

1 Includes the restatement stemming from the change made in Hydro-Québec's accounting policies in 2010 for the purpose of complying with IFRS and the restatement arising from the implementation of line-by-line recording of the results of institutions in the health and social services and education networks, as required by the new CICA accounting standards established in 2009-2010.

## 1.2 Gross debt

The government's gross debt corresponds to the sum of the debt contracted on financial markets and the net liability for the retirement plans and for employee future benefits of public and parapublic sector employees, minus the balance of the Generations Fund.

Preliminary results show that, as at March 31, 2010, the gross debt should stand at \$160 117 million, or 53.2% of GDP. As at March 31, 2015, the gross debt is expected to be \$192 169 million, or 52.0% of GDP.

TABLE D.3

### Gross debt as at March 31 (millions of dollars)

	2009	2010 <sup>P</sup>	2011 <sup>P</sup>	2012 <sup>P</sup>	2013 <sup>P</sup>	2014 <sup>P</sup>	2015 <sup>P</sup>

<b>GROSS DEBT</b>	<b>151 385</b>	<b>160 117</b>	<b>170 599</b>	<b>180 084</b>	<b>186 490</b>	<b>189 428</b>	<b>192 169</b>
<b>As a % of GDP</b>	<b>50.1</b>	<b>53.2</b>	<b>54.5</b>	<b>55.1</b>	<b>54.6</b>	<b>53.3</b>	<b>52.0</b>

P: Preliminary results for 2010 and forecasts for subsequent years.

1 Excludes pre-financing.

2 Does not take into account the debt of institutions in the health and social services and education networks contracted in their own name.

3 The consolidated direct debt represents the debt that has been contracted on financial markets.

The consolidated direct debt consists of the direct debt of the Consolidated Revenue Fund and the direct debt of entities whose results are consolidated line by line with those of the government. The main consolidated entities are Financement-Québec, the Fonds de conservation et d'amélioration du réseau routier, the Corporation d'hébergement du Québec, the Société québécoise d'assainissement des eaux, the Société immobilière du Québec, Investissement Québec, the Immobilière SHQ, the Agence métropolitaine de transport and the Société du Palais des congrès de Montréal. As at March 31, 2010, the consolidated direct debt is expected to total \$134 021 million.

The net retirement plans liability represents the retirement plans liability minus the balance of the Retirement Plans Sinking Fund (RPSF), an asset established that can be used to pay the retirement benefits of public and parapublic sector employees. As at March 31, 2010, the net retirement plans liability should amount to \$28 763 million.

The net liability for employee future benefits consists of the government's commitments for accumulated sick leave and the survivor's pension plan, minus assets constituted in regard to these commitments. As at March 31, 2010, the net employee future benefits liability should be nil, since assets will be equal to liabilities.

As at March 31, 2010, the sums accumulated in the Generations Fund are expected to amount to \$2 667 million.

### 1.2.1 Net retirement plans liability

The net retirement plans liability is calculated by subtracting the balance of the RPSF from the retirement plans liability.

The liability for the retirement plans represents the present value of the retirement benefits that the government will pay to public and parapublic sector employees, taking into account the conditions of their plans and their years of service. This liability should stand at \$66 961 million as at March 31, 2010.

The government created the RPSF in 1993. As at March 31, 2010, the book value of the RPSF is expected to be \$38 198 million.

The net liability for the retirement plans should total \$28 763 million as at March 31, 2010.

TABLE D.4

<b>Subtotal</b>	<b>66 961</b>
Less: Retirement Plans Sinking Fund	- 38 198
<b>NET RETIREMENT PLANS LIABILITY</b>	<b>28 763</b>

P: Preliminary results.

### 1.2.2 Net employee future benefits liability

The government records under its debt the value of its commitments regarding future benefits programs for its employees, namely, accumulated sick leave, which is payable notably when an employee retires, and pensions paid to the survivors of a government employee. These programs give rise to long-term obligations whose costs are covered in full by the government.

Since the December 2007 accounting reform, an actuarial valuation is done of future employee benefits and, like the liability for the retirement plans, these benefits are included in the government's gross debt. Previously, employee future benefits were entered in the government's accounts payable and the Survivor's Pension Plan Fund was entered under long-term investments.

In addition, as part of the December 2007 accounting reform, the government undertook to create the Accumulated Sick Leave Fund. This fund was created in October 2008. The sums accumulated in this new fund are subtracted from the liability for employee future benefits.

The balance of the net employee future benefits liability is expected to be nil as at March 31, 2010.

TABLE D.5

**Net employee future benefits liability as at March 31, 2010<sup>P</sup>**

(millions of dollars)

P: Preliminary results.

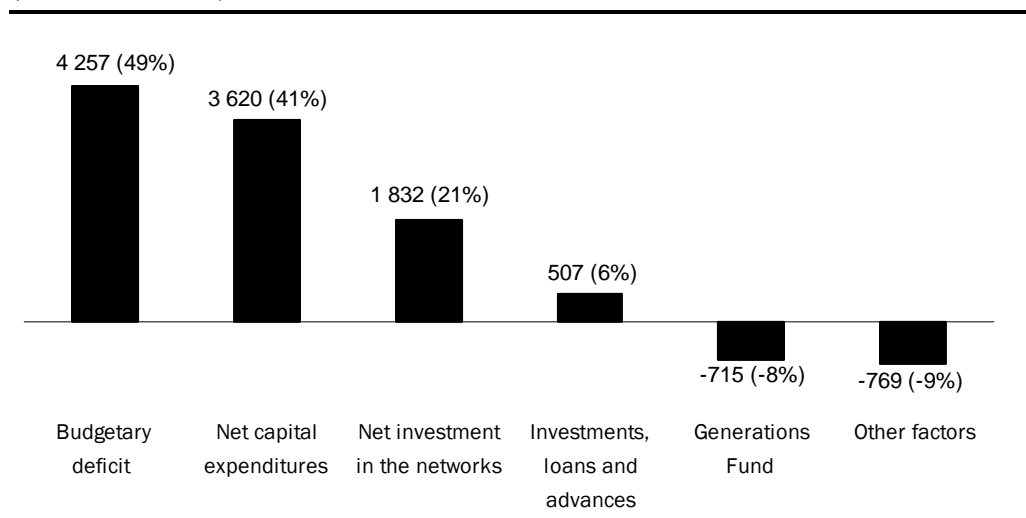

**1.2.3 Change in gross debt in 2009-2010**

In 2009-2010, the government's gross debt should increase by \$8 732 million.

CHART D.1

**Factors responsible for growth in the gross debt in 2009-2010**

(millions of dollars)

The gross debt continues to rise for the following reasons:

- The deficit amounts to \$4 257 million.
- The government makes investments in fixed assets (e.g. roads) that require borrowings. When these capital expenditures are made, they are posted to the government's balance sheet. Subsequently, they are gradually recorded as expenditures based on the useful life of the assets concerned. In 2009-2010, net capital expenditures should cause the gross debt to increase by \$3 620 million.
- Net investments in the health and social services and education networks, which include loans made by Financement-Québec and the Corporation d'hébergement du Québec to network institutions to fund their capital expenditures, should raise the gross debt by \$1 832 million in 2009-2010.
- The government makes investments in its corporations through advances and direct capital outlays or by allowing these corporations to keep part of their earnings to finance their own investments.

For example, Hydro-Québec pays 75% of its net earnings<sup>1</sup> as dividends to the government and keeps 25% to fund its own investments, particularly hydroelectric dams. The portion of earnings that the government is leaving Hydro-Québec in 2009-2010 (\$632 million) constitutes an investment by the government in Hydro-Québec, which creates a financial requirement for the government and thus leads to an increase in the gross debt.

In addition, the government invested \$250 million in the Société générale de financement. This investment is part of the \$1 000-million contribution announced in the January 2009 Economic Statement in order to stimulate investment in Québec businesses.

Overall, the government's investments, loans and advances should lead to a \$507-million increase in the gross debt in 2009-2010. This amount includes the withdrawal of the balance of the stabilization reserve that was deposited with the Caisse de dépôt et placement du Québec (\$295 million).

- Changes in some of the government's other asset and liability items, such as accounts payable and accounts receivable, should lower the gross debt by \$769 million in 2009-2010.
- Lastly, deposits in the Generations Fund should reduce the debt by \$715 million in 2009-2010.

---

<sup>1</sup> The amount of the dividend is calculated according to section 15.2 of the *Act respecting Hydro-Québec*, which stipulates that:

15.2 "The distributable surplus for a particular financial period is equal to 75% of the total of the net operating income of the Company and of its net investment income for the same period, less the gross interest expenditure for the same period..."

The following table shows how the government's gross debt has changed since March 31, 1998. The data for years prior to the 2007 accounting reform have been restated to make them comparable with those following the reform, i.e. for 2006-2007 and subsequent years.

TABLE D.6

2014-2015 <sup>P</sup>	189 428	—	1 024	823	2 502	- 66	- 1 542	2 741	192 169	52.0

Note: Gross debt figures prior to 2006-2007 have been restated to reflect the impacts of the government's accounting reform in December 2007. The purpose of this restatement was to obtain comparable debt levels over a long period. Moreover, once line-by-line recording of the results of institutions in the health and social services and education networks is completed, gross debt data will be restated. A positive entry indicates an increase in the debt and a negative entry, a decrease.

P: Preliminary results for 2009-2010 and forecasts for subsequent years.

- 1 The budgetary balance prior to 2006-2007 could not be restated to reflect the impacts of the December 2007 government accounting reform because information on a comparable basis is not available.
- 2 Includes mainly loans by Financement-Québec and the Corporation d'hébergement du Québec to institutions in the health and social services and education networks. As of 2006-2007, the net investment in the networks also includes the change in the accumulated deficits of network institutions.
- 3 Corresponds to investments in fixed assets made during the year less the yearly depreciation expenditure. Includes investments made in the course of private-public partnership agreements.
- 4 Includes in particular the change in "Other accounts," such as accounts receivable and accounts payable, as well as the change in the value of the debt in foreign currency.
- 5 Represents the increase in the balance of the Generations Fund during the fiscal year stemming from deposits in the fund and investment income.
- 6 Excludes pre-financing.

## 1.2.4 Debt burden

One way to measure the extent of the government's indebtedness is to compare its debt to the size of the economy, i.e. gross domestic product (GDP). The debt/GDP ratio is then calculated. GDP represents the total value of goods and services produced in an economy during a given period. It is the source of the revenue the government collects to fund its activities, including payment of debt service. The comparison of the government's debt to GDP is similar, for example, to the case of a person who wants to borrow to buy a house. The amount of the person's debt (mortgage, car loan, etc.) is compared to his or her income to assess his or her level of indebtedness.

Since March 31, 1998, the Québec government's gross debt/GDP ratio has fallen significantly. While gross debt was equivalent to 58.9% of GDP as at March 31, 1998, this percentage stood at 50.1% as at March 31, 2009. The ratio is expected to rise to 55.1% as at March 31, 2012, in particular because of the forecast deficits and the economic situation. The gross debt/GDP ratio should then decline to 52.0% as at March 31, 2015.

CHART D.2

### Gross debt<sup>1</sup> as at March 31 (as a percentage of GDP)

P: Preliminary results for 2010 and forecasts for subsequent years.

1 Excludes pre-financing.

### 1.2.5 New debt reduction objectives

The Minister of Finance announced the creation of the Generations Fund in the March 23, 2006 Budget Speech. The government deposits certain revenues in the fund, which will be used later to pay down the debt.

The goal in establishing the fund was to ensure that the government's total debt would represent 25% of GDP in 2025-2026. This objective was enshrined in the *Act to reduce the debt and establish the Generations Fund*, adopted on June 15, 2006. The objectives set in the Act concern the government's total debt, the debt concept used for the purposes of the government reporting entity in effect at the time the Act was passed.

In December 2007, the government carried out a major accounting reform. In particular, this reform broadened the reporting entity to include institutions in the health and social services networks and most institutions in the education network. A new debt concept, gross debt, was created at the time to reflect the changes made to the reporting entity. The accounting reform added \$21 billion in debt, or the equivalent of 7 percentage points of GDP. Previously, this additional amount of debt was included almost in its entirety in the debt of the other components of Québec's public sector.

TABLE D.7

#### Total debt and gross debt of the Québec government as at March 31, 2007

(millions of dollars)

<b>TOTAL DEBT FOR THE PURPOSES OF THE ACT TO REDUCE THE DEBT AND ESTABLISH THE GENERATIONS FUND<sup>1</sup></b>	<b>122 575</b>
<b>As a % of GDP</b>	<b>43.4</b>
Plus: Debt of Financement-Québec	12 073
Debt of the Corporation d'hébergement du Québec and other entities	3 560
Debt of the Société québécoise d'assainissement des eaux	2 522
Debt of Immobilière SHQ	1 942
Net employee future benefits liability	752
Subtotal	20 849
<b>GROSS DEBT<sup>1</sup></b>	<b>143 424</b>
<b>As a % of GDP</b>	<b>50.8</b>

1 Excludes pre-financing.

In addition, the recession will have left budgetary deficits totalling \$12 863 million from 2009-2010 to 2012-2013, causing the debt to rise.

Accordingly, as provided for in last year's budget, the Generations Fund legislation will be amended to revise the debt reduction objectives.

The government is determined to reduce Québec's indebtedness so as to ensure greater intergenerational fairness. To that end, additional deposits will be made in the Generations Fund starting in fiscal 2014-2015, that is, once fiscal balance has been restored. Revenue generated by the increase in the price of heritage pool electricity will be paid into the Generations Fund.

In recent years, discussions on the debt have highlighted the distinction between "good debt" and "bad debt".

Good debt is debt that is contracted to acquire an asset: for example, to build a road, a school or a hospital. Bad debt is debt that does not correspond to any asset. This is the debt that needs to be addressed first.

Debt representing accumulated deficits, i.e. bad debt, is expected to amount to \$106 628 million, or 35.4% of GDP, as at March 31, 2010.

The government's first objective is to reduce this ratio by half to 17% in 2025-2026. This is a maximum level.

TABLE D.8

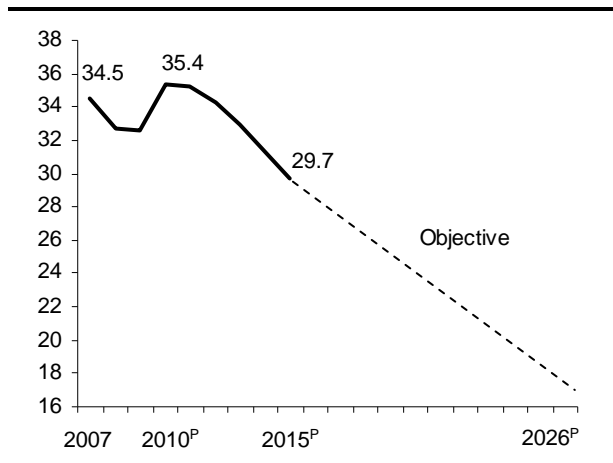

**New debt reduction objectives**  
(as a percentage of GDP)

	<b>March 31, 2026</b>
Debt representing accumulated deficits	17
Gross debt	45

In addition, another objective will be set for the gross debt. As at March 31, 2010, this debt should stand at \$160 117 million, or 53.2% of GDP. This ratio is forecast to reach a maximum of 55.1% of GDP in 2011-2012 and to begin falling thereafter. The government’s objective is to bring the gross debt/GDP ratio down to 45% in 2025-2026. Once again, this is a maximum level.

## 1.3 Public sector debt

Public sector debt includes the government's gross debt as well as the debt of the health and social services and education networks, Hydro-Québec, municipalities and other government enterprises. This debt has served notably to finance public infrastructures, such as roads, schools, hospitals, hydroelectric dams and water treatment plants.

Preliminary results show that, as at March 31, 2010, Québec's public sector debt should stand at \$218 489 million, or 72.6% of GDP. These figures must be put into perspective for they do not take into account the economic value of certain assets held by the government, such as Hydro-Québec, the Société des alcools and Loto-Québec.

TABLE D.9

### Public sector debt as at March 31 (millions of dollars)

	2007	2008	2009	2010 <sup>P</sup>
Government's gross debt <sup>1</sup>	143 424	148 151	151 385	160 117
Hydro-Québec	32 674	32 399	36 668	36 803
Municipalities <sup>2</sup>	16 409	17 321	18 639	19 897

1 Excludes pre-financing.

2 Corresponds to the long-term debt contracted by municipalities in their own name. Part of this debt is subsidized by the government (\$2 846 million as at March 31, 2010).

3 Corresponds to the long-term debt contracted by network institutions in their own name, for which the government subsidizes the debt service through transfers for repaying the principal and paying the interest on borrowings.

4 Excludes the debt of enterprises that is guaranteed by a third party or secured by assets such as inventories and accounts receivable.

## 1.4 Comparison of the debt of Canadian provinces

It is worthwhile comparing the concepts of debt used by the Québec government with those used by other governments in Canada.

An analysis of the budget documents of the federal and provincial governments shows that the concepts of debt used to assess financial position vary widely from province to province.

The preferred concept of debt in British Columbia and Saskatchewan is direct debt. Alberta, New Brunswick, Newfoundland and Labrador, Manitoba and Nova Scotia use the concept of net debt. As for Prince Edward Island, its recent budget documents make no mention of its debt.

Four governments use the concept of debt representing accumulated deficits as a measure of indebtedness in their budget documents. They are the government of Québec, the federal government and the governments of Ontario and Alberta.

Be it on the basis of the gross debt or the debt representing accumulated deficits, Québec is the most heavily indebted province.

CHART D.5

### Gross debt and debt representing accumulated deficits as at March 31, 2009 (as a percentage of GDP)

1 A negative entry means that the government has an accumulated surplus.

Sources: Ministère des Finances du Québec, governments' public accounts and Statistics Canada.

The following table shows the debt of the federal government and each of the provinces as at March 31, 2009. The figures in boxes refer to the concept of debt used by the government concerned in its budget documents to measure its level of debt. Some governments use more than one concept.

TABLE D.10

As a % of GDP	32.6	29.0	19.3	- 3.5	- 15.9	6.2	17.6	9.6	- 2.2	23.9	17.2

Note: The boxes show the debt concept(s) used in the government's budget documents.

1 Gross debt is not shown in most government public accounts. However, the public accounts do show the components of gross debt, i.e. the consolidated direct debt, the net retirement plans liability and the net employee future benefits liability. It is therefore possible to deduce the amount of the gross debt.

2 Financial assets, net of other liabilities.

3 A negative entry indicates that the government has net assets or an accumulated surplus.

4 After taking the stabilization reserve into account.

Sources: Ministère des Finances du Québec, governments' public accounts and Statistics Canada.

## 1.5 Retirement plans

The Québec government participates financially in the retirement plans of its employees. As at December 31, 2008, these plans had 541 930 participants and 270 934 beneficiaries.

TABLE D.11

### Retirement plans of public and parapublic sector employees as at December 31, 2008

	Active participants	Beneficiaries
Government and Public Employees Retirement Plan (RREGOP)	505 000	172 294
Pension Plan of Management Personnel (PPMP)	27 400	20 408
Other plans:		
– Teachers Pension Plan (TPP) and Pension Plan of Certain Teachers (PPCT) <sup>1</sup>	330	48 160
– Civil Service Superannuation Plan (CSSP) <sup>1</sup>	175	23 354
– Pension Plan for the Members of the Sûreté du Québec (PPMSQ)	5 300	4 507
– Pension Plan of Peace Officers in Correctional Services (PPPOCS)	3 100	1 452
– Pension Plan of the Judges of the Court of Québec and of Certain Municipal Courts (PPJCQM)	270	324
– Pension Plan for Federal Employees Transferred to Employment with the Gouvernement du Québec (PPFEQ)	230	112
– Pension Plan of the Members of the National Assembly (PPMNA)	125	323
Total for other plans	9 530	78 232
<b>TOTAL</b>	<b>541 930</b>	<b>270 934</b>

<sup>1</sup> These plans have not accepted any new participants since July 1, 1973.  
Source: Commission administrative des régimes de retraite et d'assurances.

These plans are defined benefit retirement plans, which means that they guarantee participants a certain level of income upon retirement. Benefits are calculated on the basis of participants' average income for the best paid years (generally five) and their number of years of service. The pension usually represents 2% of an employee's average income per year of service, for a maximum of 70%. Benefits are partially indexed to inflation.

The Commission administrative des régimes de retraite et d'assurances (CARRA) is responsible for administering the retirement plans. In 2009-2010, the government should pay \$4 108 million to cover its share of the benefits paid to its retired employees.

### **□ Retirement plans liability**

In its financial statements, the government discloses the present value of the retirement benefits it will pay to its employees, taking into account the conditions governing their plans, as well as their years of service. This value is called the retirement plans liability.

CARRA performs actuarial valuations of the liability for each retirement plan in conformity with the rules set for the public sector by the Canadian Institute of Actuaries (CIA) and the Canadian Institute of Chartered Accountants (CICA).

As at March 31, 2010, the government's retirement plans liability should stand at \$66 961 million, an amount that is recognized in the government's gross debt.

TABLE D.12

**Retirement plans liability**

<b>RETIREMENT PLANS LIABILITY</b>	<b>66 961</b>

P: Preliminary results.

## □ Annual retirement plans expenditure

Every year, the government records its expenditure as an employer with regard to the retirement plans.

In 2009-2010, this expenditure should total \$2 015 million. It comprises two components:

- the net cost of vested benefits, that is, the present value of retirement benefits that employees have accumulated for work performed during the year, i.e. \$1 529 million;
- the amortization of revisions to the government's actuarial obligations that arise from the updating of actuarial valuations, for a cost of \$486 million.

TABLE D.13

<b>RETIREMENT PLANS EXPENDITURE</b>	<b>2 015</b>

P: Preliminary results.

## 1.6 Retirement Plans Sinking Fund

The Retirement Plans Sinking Fund was created in 1993. The RPSF is an asset that can be used to pay the retirement benefits of public and parapublic sector employees.

As at March 31, 2010, the book value of the RPSF should amount to \$38 198 million.

TABLE D.14

### Change in the Retirement Plans Sinking Fund (RPSF)

(millions of dollars)

	Book value, beginning of year	Deposits	Investment Income Imputed	Book value, end of year
1993-1994	—	850	4	854

2009-2010 <sup>P</sup>	36 025	—	2 173	38 198

P: Preliminary results.

1 Taking into account restatements arising from the government accounting reforms of 1997-1998 and 2006-2007.

2 Taking into account an adjustment arising from consideration of the expected average remaining service life (EARSLS) of participants under the PPMP (9 years instead of 14 years).

The information on the RPSF shown in the preceding table was established on the basis of the government's accounting policies, which are in full compliance with generally accepted accounting principles (GAAP) for Canada's public sector.

The book value of the RPSF as at March 31, 2010 is higher than its market value. As a result of the accounting policies, the difference between these two items will be fully amortized in the coming years. In addition, the financial impact of gradually amortizing the difference is fully incorporated into the government's financial framework over the entire planning horizon. Section 1.10 describes these items in greater detail.

The government's accounting policies apply when the RPSF's book value is higher than its market value as well as when it is lower. As shown by the following table, the book value of the RPSF has been lower than its market value 8 times in the past 16 years.

TABLE D.15

**Book value and market value of the Retirement Plans Sinking Fund as at March 31**

(millions of dollars)

	<b>Book value</b>	<b>Market value</b>	<b>Difference</b>

P: Preliminary results.

1 Market value as at December 31, 2009.

□ **Amounts deposited in the RPSF have no impact on gross debt**

The government issues bonds on financial markets in order to make deposits in the RPSF. However, the amounts deposited in the RPSF do not affect the government's gross debt.

Indeed, the amount of borrowings contracted to make deposits in the RPSF increases the direct debt. At the same time, however, these deposits reduce the net retirement plans liability by the same amount. Therefore, the net impact on the gross debt is nil.

TABLE D.16

**Illustration of the impact on the government's gross debt of borrowing \$1 billion on financial markets and depositing it in the RPSF<sup>1</sup>**

(millions of dollars)

	Before deposit	After deposit	Change

## □ A decline in debt service

Deposits in the RPSF entail a reduction in the government's debt service. The rates of return on funds managed by the Caisse de dépôt et placement du Québec are generally higher than interest rates on Québec government bonds issued to finance deposits in the RPSF. Therefore, the income of the RPSF, which is applied against the government's debt service, is usually higher than the additional interest charges that arise from new borrowings. This leads to a net decrease in the government's debt service.

Since the RPSF was created, its return has been higher than the cost of new long-term borrowings by the government 12 years out of 16.

TABLE D.17

### Comparison of the RPSF's annual return and the Québec government's borrowing costs

(per cent)

	Return of the RPSF <sup>1</sup>	Cost of new borrowings <sup>2</sup>	Difference

2009-2010	10.7	4.4	6.3

1 On a calendar year basis.

2 On a fiscal year basis.

3 From February to December 1994.

## □ A flexible deposit policy

In December 1999, as part of an agreement concluded for the renewal of its employees' collective agreements, the government set the objective that the funds accumulated in the RPSF would be equal, in 2020, to 70% of its actuarial obligations in regard to the retirement plans of public and parapublic sector employees.

However, the government has all the flexibility needed to apply this policy. Deposits in the RPSF are made only when market conditions are favourable, particularly with respect to interest rates and market receptiveness to bond issues.

The RPSF's assets are expected to represent roughly 54% of the government's actuarial obligations in regard to the retirement plans of public and parapublic sector employees in 2009-2010. The target of 70% should be attained three years earlier than anticipated, i.e. in 2016-2017.

CHART D.6

### The RPSF in proportion to the government's actuarial obligations regarding the retirement plans of public and parapublic sector employees (per cent)

## 1.7 Employee future benefits

In addition to the retirement plans, the government records under its debt the value of its commitments regarding two future benefits programs for its employees, namely, accumulated sick leave, which is payable notably when an employee retires, and pensions paid to the survivors of a government employee. These programs give rise to long-term obligations whose costs are covered in full by the government.

The balance of the net liability for employee future benefits should be nil as at March 31, 2010.

TABLE D.18

### Net employee future benefits liability (millions of dollars)

	<b>March 31, 2010<sup>P</sup></b>
Accumulated sick leave	703
Survivor's pension plan	405
Less: Accumulated Sick Leave Fund	- 657
Survivor's Pension Plan Fund	- 451
<b>NET EMPLOYEE FUTURE BENEFITS LIABILITY</b>	<b>—</b>

P: Preliminary results.

## 1.8 Generations Fund

The Generations Fund was created in June 2006 by the adoption of the *Act to reduce the debt and establish the Generations Fund*. The sums accumulated in the fund are dedicated exclusively to repaying the debt.

Section G presents the results of the Generations Fund in accordance with the requirements of the Act.

As at March 31, 2010, the book value of the Generations Fund is expected to stand at \$2 667 million. The following table shows the book and market values of the Generations Fund since its creation.

TABLE D.19

### Book value and market value of the Generations Fund as at March 31

(millions of dollars)

	Book value	Market value	Difference
2006-2007 <sup>1</sup>	584	576	8
2007-2008	1 233	1 147	86
2008-2009	1 952	1 598	354
2009-2010 <sup>P</sup>	2 667	2 512 <sup>2</sup>	155

P: Preliminary results.

1 The first payment was made to the Generations Fund on January 31, 2007.

2 Market value of \$2 304 million as at December 31, 2009 plus the revenues dedicated to the Generations Fund from January 1 to March 31, 2010.

## □ Faster reduction of the debt

Financing for the Generations Fund comes from Québec government revenues dedicated exclusively to repaying the debt.

If the Generations Fund did not exist, these revenues would reduce the Québec government's financial requirements every year. They would also make it possible to reduce Québec's indebtedness. However, it would not be easy for Quebecers to see, over time, how the debt is being brought down thanks to the revenues dedicated to that end.

The Generations Fund makes it possible to follow the change in the funds the government sets aside to repay the debt. These funds, which are administered by the Caisse de dépôt et placement du Québec (the Caisse), are subtracted from the government's debt. The impact on the debt is thus clear and transparent.

In addition, the returns obtained by the Caisse are usually higher than the cost of new borrowings by the Québec government, which helps to accelerate debt burden reduction.

Since the first deposit was made in the Generations Fund in January 2007, the return has been higher than the cost of new borrowings by the government two years out of three. It should be noted that in the case of the RPSF, which has existed since 1993, this has occurred 12 years out of 16.

TABLE D.20

### Comparison of the Generations Fund's annual return and the Québec government's borrowing costs

(per cent)

	Return of the Generations Fund <sup>1</sup>	Cost of new borrowings <sup>2</sup>	Difference
2007-2008	5.6 <sup>3</sup>	4.8	0.8
2008-2009	- 22.4	4.2	- 26.6
2009-2010	11.3	4.4	6.9

1 On a calendar year basis.

2 On a fiscal year basis.

3 Return realized from February to December 2007, since the first deposit was made in the Generations Fund on January 31, 2007.

## 1.9 Returns of the Caisse de dépôt et placement du Québec on funds deposited by the Ministère des Finances

In 2009, the return on funds deposited by the Ministère des Finances with the Caisse was 10.74% for the Retirement Plans Sinking Fund, 11.25% for the Generations Fund and 10.14% for the Accumulated Sick Leave Fund. These results exceeded the average return for Caisse depositors as a whole (10.04%). The details of the investment policy are presented in the box on page D.35.

TABLE D.21

Accumulated Sick Leave Fund	10.14	661

### 1.9.1 Retirement Plans Sinking Fund

The Retirement Plans Sinking Fund showed a return of 10.74% in 2009. Its market value was \$28 835 million as at December 31, 2009.

The assets of the RPSF are managed by the Caisse in accordance with an investment policy established by the Ministère des Finances. This investment policy was established taking several factors into account, including the 10-year return, standard deviation and correlation forecasts for various categories of assets prepared by the Caisse, as well as opportunities for investing in these assets.

The investment policy of the RPSF consists of 30.75% fixed-income securities (bonds, etc.), 36.25% equities and 33.0% other investments (real estate, private equity, etc.). These weightings are similar to those used on average by all depositors with the Caisse.

TABLE D.22

**Investment policy of the RPSF as at January 1, 2010**

(per cent)

	<b>Benchmark portfolio of the RPSF</b>	<b>Average benchmark portfolio of all depositors<sup>1</sup></b>
Fixed-income securities	30.75	31.1
Equities	36.25	34.5
Other investments	33.00	34.4
<b>TOTAL</b>	<b>100.0</b>	<b>100.0</b>

<sup>1</sup> Data for 2008. Source: Caisse de dépôt et placement du Québec, Annual Report 2008. The annual report for 2009 is not available yet.

With its investment policy, the RPSF should generate a long-term (10-year or longer) annual return of 7.0%. This return is comparable to that forecast by most retirement plans in Canada. According to a recent survey by Morneau Sobeco<sup>2</sup>, the anticipated long-term return on assets of two retirement plans out of three in Canada is equal to or above 7.0%.

It is important to note that the RPSF's investment policy is based on a long-term horizon and constitutes the benchmark portfolio for the Caisse. However, through active management, the Caisse adjusts the allocation of the RPSF's assets, particularly to take fluctuations in the economic and financial situation into account. The RPSF's benchmark portfolio would have generated a return of 15.27% in 2009.

<sup>2</sup> Morneau Sobeco (2009), *2009 Survey of Economic Assumptions in Accounting for Pensions and Other Post-Retirement Benefits*.

## 1.9.2 Generations Fund

The Generations Fund posted a return of 11.25% in 2009. Its market value was \$2 304 million as at December 31, 2009.

The assets of the Generations Fund are managed by the Caisse in accordance with an investment policy established by the Ministère des Finances. This investment policy was established taking several factors into account, including the 10-year return, standard deviation and correlation forecasts for various categories of assets prepared by the Caisse, as well as opportunities for investing in these assets.

The investment policy of the Generations Fund consists of 37.0% fixed-income securities (bonds, etc.), 35.0% equities and 28.0% other investments (real estate, private equity, etc.).

TABLE D.23

### Investment policy of the Generations Fund as at January 1, 2010

(per cent)

	Benchmark portfolio of the Generations Fund	Average benchmark portfolio of all depositors <sup>1</sup>
Fixed-income securities	37.0	31.1
Equities	35.0	34.5
Other investments	28.0	34.4
<b>TOTAL</b>	<b>100.0</b>	<b>100.0</b>

<sup>1</sup> Data for 2008. Source: Caisse de dépôt et placement du Québec, *Annual Report 2008*. The annual report for 2009 is not available yet.

The investment policy of the Generations Fund aims to achieve a long-term (10-year or longer) annual return of 6.8%. It is important to note that the investment policy of the Generations Fund is based on a long-term horizon and constitutes the benchmark portfolio for the Caisse. However, through active management, the Caisse adjusts the allocation of the Generations Fund's assets, particularly to take fluctuations in the economic and financial situation into account. The benchmark portfolio of the Generations Fund would have generated a return of 15.04% in 2009.

### 1.9.3 Accumulated Sick Leave Fund

The Accumulated Sick Leave Fund (ASLF) showed a return of 10.14% in 2009. Its market value was \$661 million as at December 31, 2009.

The assets of the ASLF are managed by the Caisse in accordance with an investment policy established by the Ministère des Finances. Since January 1, 2009, the ASLF's investment policy has been identical to that of the RPSF, as the creation of the ASLF stems from a long-term commitment made by the government in regard to employee future benefits, which is similar to the commitment regarding the retirement plans.

It is important to note that the ASLF's investment policy constitutes the benchmark portfolio for the Caisse. However, through active management, the Caisse adjusts the allocation of the ASLF's assets, particularly to take fluctuations in the economic and financial situation into account. The ASLF's benchmark portfolio would have generated a return of 15.27% in 2009.

RPSF: Retirement Plans Sinking Fund.

ASLF: Accumulated Sick Leave Fund.

<sup>1</sup> Source: Caisse de dépôt et placement du Québec, *Annual Report 2008*. The annual report for 2009 is not available yet.

## 1.10 Impact of the returns of the Retirement Plans Sinking Fund on Debt Service

As indicated in section 1.6, the income of the RPSF is applied against the government's debt service. The returns of the Caisse affect RPSF income and therefore debt service.

The returns realized by the Caisse on RPSF income are taken into account in the government's balance sheet and results by applying the accounting policy adopted in the wake of the December 2007 reform of government accounting in accordance with generally accepted accounting principles (GAAP).

“When determining a government's retirement benefit liability and expense, plan assets would be valued at market-related values. Under this method, plan assets are recorded at market value or they are adjusted to market value over a period not to exceed five years. Values adjusted to market closely approximate current economic value in a manner that can minimize short-term fluctuations. Market-related values would be used because they are objective and verifiable. Once a basis of valuation is chosen it would be applied consistently.” (Canadian Institute of Chartered Accountants (CICA), *Public Sector Accounting Handbook*, section 3250, paragraph .035)

Under the accounting policy, the “adjusted market value” of the RPSF is adjusted every year based on the returns realized by the fund. If, for a given year, the realized return differs from the anticipated long-term return, the difference between the two is spread over five years. All other things being equal, this means that the adjusted market value and the market value will converge over a five-year period. It is important to note that this method is applied when returns are higher than expected as well as when they are lower.<sup>3</sup>

---

<sup>3</sup> Before the accounting reform of 2007, the value of the RPSF was adjusted only once every three years, that is, when actuarial valuations were carried out. Since the reform, it has been adjusted every year.

In addition, the differences between actual and expected return, which are spread over five years, are taken into account in RPSF income by amortizing them over a period of about 13 years, that is, the expected average remaining service life (EARSL) of retirement plan participants<sup>4</sup>. This amortization mechanism and the period used are prescribed by GAAP<sup>5</sup>.

Therefore, the returns realized by the Caisse in 2008-2009, which were lower than expected, reduce the income of the RPSF as of 2009-2010. The higher-than-anticipated returns realized by the Caisse in 2009-2010 will lead to an increase in the RPSF's income as of 2010-2011.

TABLE D.24

### Impact of the returns of the Caisse de dépôt et placement du Québec on debt service<sup>1</sup>

(millions of dollars)

	2009-2010 <sup>P</sup>	2010-2011 <sup>P</sup>	2011-2012 <sup>P</sup>
Before 2008-2009	- 48	- 80	- 58
From 2008-2009	307	635	985
From 2009-2010		- 24	- 49
<b>Increase in debt service</b>	<b>259</b>	<b>531</b>	<b>878</b>

Note: A positive entry indicates an increase in debt service and a negative entry, a decrease.

P: Preliminary results for 2009-2010 and forecasts for subsequent years.

1 Represents the impact on RPSF income, and therefore on debt service, of returns of the Caisse that are lower or higher than the anticipated long-term return (6.75%) and that are amortized.

<sup>4</sup> As with recognition of the retirement plans liability, the RPSF accounting method draws a distinction between the Pension Plan of Management Personnel (PPMP) and the other plans. The EARSL under the PPMP is 9 years compared with 14 years under the other plans.

<sup>5</sup> "...actuarial gains and losses should be amortized to the liability or asset and the related expense in a systematic and rational manner over the expected average remaining service life of the related employee group." Canadian Institute of Chartered Accountants (CICA), *Public Sector Accounting Handbook*, section 3250, paragraph .062. For the purposes of retirement assets, the CICA defines actuarial gains (losses) as changes in the value of plan assets that are caused notably by variances between actual results and expected results.

## 2. FINANCING

Borrowings in fiscal 2009-2010 should total \$15 475 million, i.e. \$9 742 million for the Consolidated Revenue Fund, \$2 415 million for the Financing Fund and \$3 318 million for Financement-Québec.

It should be noted that pre-financing of \$3 855 million was carried out in the last few months of the fiscal year. It will be used to cover part of the borrowing program in 2010-2011.

### 2.1 Financing strategy

The government aims to borrow at the lowest possible cost. To that end, it applies a strategy for diversifying sources of funding by market, financial instrument and maturity.

#### 2.1.1 Diversification by market

Financing transactions are conducted regularly on most markets, i.e. in Canada, the United States, Europe and Asia.

Over the past 10 years, nearly one quarter of borrowings, on average, has been contracted in foreign currency. Nonetheless, the government has only a very low exposure to foreign currencies (see section 3.1).

In 2009-2010, the government contracted 18.7% of its borrowings on foreign markets in three different currencies:

- two borrowings totalling 1 575 million euros (CAN\$2 496 million) in April 2009 and March 2010;
- two borrowings totalling 16 000 million yen (CAN\$197 million) in April 2009;
- one borrowing for 200 million Swiss francs (CAN\$206 million) in December 2009.

CHART D.7

**Borrowings by currency<sup>1</sup>**  
(per cent)

P: Preliminary results.

1 Borrowings of the Consolidated Revenue Fund, borrowings for the Financing Fund and borrowings of Financement-Québec.

## 2.1.2 Diversification by instrument

To satisfy investors' needs, an extensive array of financial products is used in the course of financing transactions.

Long-term instruments consist primarily of public bond issues, private borrowings and savings products.

The long-term instruments used in 2009-2010 consisted mainly of public issues (76.0%) and private borrowings (15.4%).

CHART D.8

**Borrowings in 2009-2010<sup>P</sup> by instrument**

P: Preliminary results.

<sup>1</sup> Includes the Business Assistance — Immigrant Investor Program and borrowings from the Canada Pension Plan Investment Fund.

**2.1.3 Diversification by maturity**

Maturities of new borrowings are distributed over time to obtain a stable refinancing profile and ensure the government's regular presence on capital markets.

In 2009-2010, 56.7% of borrowings contracted had a maturity of 6 to 10 years; 23.5%, 11 to 39 years; 18.5%, 5 years or less; and 1.3%, over 40 years.

CHART D.9

**Borrowings in 2009-2010<sup>P</sup> by maturity**

P: Preliminary results.

This diversification by maturity has an impact on the maturity of the debt shown in the following chart. As at March 31, 2010, the average maturity of the debt should be 11 years.

CHART D.10

**Maturity of the long-term debt as at March 31, 2010<sup>P</sup>**  
(millions of dollars)

Note: Direct debt of the Consolidated Revenue Fund, debt contracted to make advances to the Financing Fund and debt of Financement-Québec.  
P: Preliminary results.

## 2.2 Financing program

The financing program of the Consolidated Revenue Fund makes it possible to refinance maturing borrowings, contribute to the Retirement Plans Sinking Fund and meet new financial requirements, particularly for capital investments and investments in government corporations.

The Financing Fund makes loans to consolidated entities (e.g. Fonds de conservation et d'amélioration du réseau routier, Investissement Québec, Société immobilière du Québec, Corporation d'hébergement du Québec) and to certain government enterprises.

Financement-Québec makes borrowings on financial markets to meet the needs of institutions in the health and social services and education networks.

In 2009-2010, the government contracted borrowings totalling \$15 475 million, including \$3 855 million in pre-financing conducted over the last few months of the year.

In 2010-2011, the financing program is expected to amount to \$12 936 million. It would have amounted to \$16 791 million had there not been any pre-financing in 2009-2010. In 2011-2012, the financing program should total \$17 857 million.

TABLE D.25

**The government's financing program**

(millions of dollars)

	2008-2009	2009-2010 <sup>P</sup>	2010-2011 <sup>P</sup>	2011-2012 <sup>P</sup>
<b>CONSOLIDATED REVENUE FUND</b>

<b>FINANCING FUND</b>	<b>1 439</b>	<b>2 415</b>	<b>4 500</b>	<b>4 000</b>
<b>FINANCEMENT-QUÉBEC</b>	<b>2 675</b>	<b>3 318</b>	<b>3 500</b>	<b>3 500</b>
<b>TOTAL</b>	<b>13 414</b>	<b>15 475</b>	<b>12 936</b>	<b>17 857</b>

Note: A negative entry indicates a source of financing and a positive entry, a financial requirement.

P: Preliminary results for 2009-2010 and forecasts for subsequent years.

1 Excludes consolidated entities.

2 Net financial requirements are adjusted to take into account the non-receipt of RPSF and ASLF income.

3 Under its credit policy, which is designed to limit financial risk with respect to counterparties, the government disbursed \$3 288 million in 2009-2010 following the change in foreign exchange rates. These disbursements do not affect the debt. In 2008-2009, the government received \$3 792 million.

## Pre-financing

The government makes advance borrowings, or borrowings that would normally be made in the following fiscal year. The government obtains pre-financing to take advantage of favourable market conditions.

Over the past 10 years, the government has obtained an average of \$3 445 million in pre-financing per year.

### Pre-financing (millions of dollars)

P: Preliminary results.

### 2.2.1 Yield

Over the past two years, the yield on long-term Québec securities has been fairly stable. However, short-term interest rates have fallen considerably, reflecting the monetary policy pursued by the Bank of Canada during the financial crisis.

CHART D.11

**Yield on Québec securities**

(per cent)

Sources: PC-Bond and Ministère des Finances du Québec.

In addition, the substantial increase in the spread between the yield on Québec and federal government securities, observed starting in summer 2008, has been reduced, with the spread returning to normal levels. The same situation has been observed in the other provinces.

CHART D.12

**Yield spread on long-term (10-year) securities**

(per cent)

Source: PC-Bond.

### 3. DEBT MANAGEMENT

The government's debt management strategy aims to minimize the cost of the debt and limit the risk related to fluctuations in foreign exchange and interest rates.

The government uses a range of financial instruments, particularly interest rate and currency swap agreements, to achieve desired debt proportions by currency and interest rate.

Debt management enables the government to save money on debt service.

#### 3.1 Structure of the debt by currency

As at March 31, 2010, the proportion of the government's gross debt in Canadian dollars should amount to 96.3% and the proportion in foreign currency, 3.7%.

TABLE D.26

#### Structure of the gross debt as at March 31, 2010<sup>P</sup>

(millions of dollars)

Currency	Consolidated Revenue Fund		Consolidated direct debt		Total	%	Net retirement plans liability	Net employee future benefits liability	Less: Generations Fund	Gross debt	%
	Consolidated Revenue Fund	%	Consolidated entities	Total							
Canadian dollar	87 725	93.4	43 956	131 681	95.5	28 763	—	—	- 2 667	157 777	96.3
US dollar	308	0.3	—	308	0.2	—	—	—	—	308	0.2
Euro	1 177	1.3	—	1 177	0.9	—	—	—	—	1 177	0.7
Swiss franc	2 355	2.5	—	2 355	1.7	—	—	—	—	2 355	1.4
Yen	2 355	2.5	—	2 355	1.7	—	—	—	—	2 355	1.4
<b>Subtotal</b>	<b>93 920</b>	<b>100.0</b>	<b>43 956</b>	<b>137 876</b>	<b>100.0</b>	<b>28 763</b>	<b>—</b>	<b>—</b>	<b>- 2 667</b>	<b>163 972</b>	<b>100.0</b>
Pre-financing	- 3 855		—	- 3 855		—	—	—	—	- 3 855	
<b>TOTAL</b>	<b>90 065</b>		<b>43 956</b>	<b>134 021</b>		<b>28 763</b>	<b>—</b>	<b>—</b>	<b>- 2 667</b>	<b>160 117</b>	

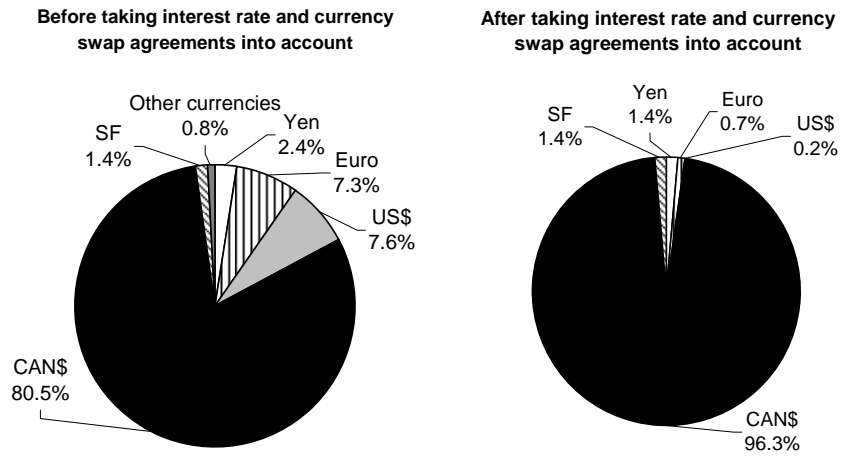

Note: The debt in foreign currency is expressed in the Canadian equivalent based on the exchange rates in effect on March 22, 2010.

P: Preliminary results.

Before interest rate and currency swap agreements are taken into account, the proportion of the debt in foreign currency as at March 31, 2010 should be 19.5%. After interest rate and currency swap agreements are taken into account, the proportion should be 3.7%.

CHART D.13

**Structure of the gross debt by currency as at March 31, 2010<sup>P</sup>**

P: Preliminary results.

### 3.2 Structure of the debt by interest rate

The government keeps part of its debt at variable rates and part at fixed rates. Since short-term interest rates are generally lower than long-term rates, keeping part of the debt at variable rates makes it possible to achieve substantial savings on debt service.

Before interest rate and currency swap agreements are taken into account, the proportion of the gross debt at variable rates should be 13.9% as at March 31, 2010. After interest rate and currency swap agreements are taken into account, the proportion should be 28.2%.

CHART D.14

#### Structure of the gross debt by interest rate as at March 31, 2010<sup>P</sup>

P: Preliminary results.

## 4. CREDIT RATINGS

### 4.1 The Québec government's credit ratings

A borrower's credit rating measures its capacity to pay the interest on its debt and repay the principal at maturity. To establish the credit rating of a borrower like the Québec government, credit rating agencies analyze a range of economic, fiscal and financial factors. Among the main factors are the size, structure and vitality of the economy, the situation on the labour market, fiscal competitiveness, public finance situation and indebtedness.

To express the quality of a borrower's credit, credit rating agencies use rating scales, namely, a scale for short-term debt and a scale for long-term debt.

The following tables show the rating scales used by agencies for short- and long-term debt.

TABLE D.27

#### Credit rating scales for short-term debt

Definition	Moody's	Standard & Poor's	Fitch Ratings	DBRS
<b>Very strong</b> capacity to pay interest and repay principal over the short term.	<b>P-1</b>	<b>A-1+</b>	<b>F1+</b>	R-1 <sup>high</sup>

<b>Generations Fund</b>	<b>- 715</b>	<b>- 715</b>	<b>—</b>	<b>- 892</b>	<b>- 972</b>
<b>TOTAL CONSOLIDATED FINANCING TRANSACTIONS</b>	<b>6 274</b>	<b>7 278</b>	<b>1 004</b>	<b>7 548</b>	<b>6 925</b>

Note: A negative entry indicates a financial requirement and a positive entry, a source of financing. For the change in cash position, a negative entry indicates an increase and a positive entry, a decrease.

P: Preliminary results for 2009-2010 and forecasts for subsequent years.

1 Disbursements totalling \$3 288 million related to transactions carried out under the credit policy decrease new borrowings by \$2 648 million and increase repayment of borrowings by \$640 million.

2 Does not take into account the net borrowings of institutions in the health and social services and education networks contracted in their own name.

3 Includes a \$3 568-million increase in temporary borrowings.
